Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

Foreword

As the Pro Chancellor of this esteemed institution, it is with great pleasure that I introduce the M.Sc. Chemistry Program to our academic community and beyond.

Chemistry, often referred to as the "central science," is at the heart of countless innovations and advancements that shape our world. From the molecules that make up the air we breathe to the complex compounds powering modern technology, the study of chemistry is indispensable to understanding the workings of our universe.

In today's rapidly evolving landscape, the demand for skilled chemists has never been greater. The M.Sc. Chemistry Program offered by our institution is designed to meet this demand by providing students with a comprehensive education that blends theoretical knowledge with practical skills.

Our dedicated faculty members, who are leading experts in their respective fields, are committed to fostering an environment of academic excellence and innovation. Through their mentorship, students will not only gain a deep understanding of core chemical principles but also develop the critical thinking and problem-solving abilities necessary to tackle the challenges of tomorrow.

Furthermore, our state-of-the-art laboratories and research facilities offer students the opportunity to engage in cutting-edge research across a variety of sub-disciplines, from organic and inorganic chemistry to materials science and analytical chemistry. By actively participating in research projects, students will have the chance to contribute to the advancement of scientific knowledge while honing their own research skills.

I am confident that graduates of our M.Sc. Chemistry Program will emerge as leaders in their field, equipped with the knowledge, skills, and passion to make meaningful contributions to society. Whether they choose to pursue careers in academia, industry, or government, they will be well-prepared to address the complex challenges facing our world through the transformative power of chemistry.

I extend my heartfelt congratulations to all the students who have chosen to embark on this journey of discovery and learning. May your pursuit of knowledge in the field of chemistry be both rewarding and fulfilling, and may you continue to strive for excellence in all your endeavors.

01 August 2023

Er. Anant Soni
Pro Chancellor & Chairman
AKS University, Satna

AKSUniversity

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

From the Desk of the Vice-Chancellor

Dear Students, Faculty, and Stakeholders,

It gives me immense pleasure to announce the launch of the M.Sc. Chemistry Program at AKS University. As we embark on this new academic endeavor, I am filled with excitement and optimism for the opportunities it will provide for our students and the contributions it will make to the field of chemistry.

At AKS University, we are committed to excellence in education and research, and the introduction of the M.Sc. Chemistry Program is a testament to this commitment. This program has been meticulously designed to equip students with the knowledge, skills, and practical experience needed to excel in the dynamic and multifaceted field of chemistry.

Our esteemed faculty members, who are renowned experts in their respective fields, will guide and inspire students throughout their academic journey. Their dedication to teaching and research will ensure that students receive a world-class education that is both rigorous and relevant to the demands of the modern world.

Furthermore, AKS University boasts state-of-the-art laboratories and research facilities that provide students with hands-on experience in conducting experiments and engaging in scientific inquiry. Through experiential learning opportunities and research projects, students will have the chance to explore their interests, deepen their understanding of chemistry, and contribute to the advancement of knowledge in the field.

As Vice Chancellor, I am confident that the M.Sc. Chemistry Program at AKS University will empower students to become good academicians and innovators in the field of chemistry. Whether they choose to pursue careers in academia, industry, or research, they will be well-prepared to make significant contributions to society and address the challenges of the 21st century.

I extend my best wishes to all the students who are considering joining the M.Sc. Chemistry Program at AKS University. Your decision to embark on this academic journey is commendable, and I am excited to see the impact you will make in the world of chemistry and beyond.

*AKS University, Satna

Professor B. A. Chopade
Vice-Chancellor

AKSUniversity

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

Preface

As the Head of the Department of Chemistry, it is my privilege to introduce the M.Sc. Chemistry curriculum, a comprehensive and dynamic program designed to cultivate the next generation of leaders and innovators in the field of chemistry.

Chemistry is a discipline that lies at the intersection of fundamental scientific principles and real-world applications. It is a subject of immense importance, influencing everything from the development of new pharmaceuticals to the design of sustainable energy solutions. As such, our M.Sc. Chemistry curriculum is built upon a strong foundation of core concepts while also incorporating the latest advancements and trends in the field.

Our curriculum is structured to provide students with a well-rounded education in all major sub-disciplines of chemistry, including organic, inorganic, physical, analytical, and green chemistry. Through a combination of lectures, laboratory work, seminars, and research projects, students will develop a deep understanding of principles on which chemistry is based and their applications in various contexts.

One of the distinguishing features of our program is its emphasis on hands-on learning and experiential education. Our state-of-the-art laboratories provide students with the opportunity to conduct experiments, analyze data, and solve problems in a real-world setting. Additionally, our faculty members, who are leading experts in their fields, are dedicated to providing mentorship and guidance to help students succeed both inside and outside the classroom.

Furthermore, our curriculum is designed to foster critical thinking, creativity, and communication skills, which are essential for success in today's rapidly evolving world. Whether students choose to pursue careers in academia, industry, government, or beyond, they will graduate from our program with the knowledge, skills, and confidence to excel in their chosen fields.

I am confident that the M.Sc. Chemistry curriculum will provide students with a transformative educational experience that prepares them for a lifetime of learning, discovery, and achievement. I extend my best wishes to all the students embarking on this academic journey, and I look forward to witnessing their growth and success in the years to come.

DEPARTMENT OF CHEMISTRY

FACULTY OF BASIC SCIENCE

Introduction

MSc in Chemistry is a two year postgraduate program divided in four semesters with 107 credits. This program is designed to provide in-depth knowledge and expertise in Chemistry with flexibility and options. The Chemistry is a fundamental science playing important role to improve human life by providing various needful materials and goods used in society with sustainability. There has been unprecedented development in chemistry in the last few decades. New branches of chemistry are emerging and gaining importance, such as green chemistry, materials chemistry, computational chemistry, supramolecular chemistry etc. The industrial practices which are based on chemistry are also undergoing sustainable changes and are increasing by adopting recently created knowledge in chemistry. Recently adopting Computer based techniques not only accelerated growth in chemistry but also revolutionized the practices of entire field of chemistry. A chemist is also related to other disciplines of science. Thus, after long duration greater specialization in undergraduate and graduate curricula interdisciplinary approach now more relevant

Vision

To provide trained & skilled human resources in the field of chemical science as researchers, educators, chemists and assist the chemical industries as well as stakeholders in the world

Mission

M01: To develop skilled educators, researchers and scientists in field of chemical science

M02: To develop skillful human resources for industries and businesses based on chemical science

M03: To develop complete personality of students by providing student centric teaching and research facilities.

M04: To achieve academic excellence in chemical science through an innovative teaching-learning process.

AKSUniversity

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

PROGRAM EDUCATIONAL OBJECTIVES (PEO)

PEO01: To develop skills in the students with practical knowledge work and able to solve problem in teaching, research and industrial area of chemistry

PEO02: To develop R&D temperament among the students for development, innovation and sustainable practices in chemical science

PEO03: To develop ethical principles among the students and commitment of fulfilling international, national and local needs and social responsibilities with his/her professional excellence.

PEO04: Ability to understand the impact of professional chemistry base solutions in societal, economic and environmental contexts and demonstrate knowledge and need for sustainable development

Program Outcomes (PO) for M.Sc. Chemistry (CBCS)

After completion of program student will

PO ₁	Knowledge	demonstrate broad disciplinary knowledge acquired during study
PO ₂	Research Aptitude	ask relevant/ appropriate questions for identification formulation and analysis the research problems and to draw conclusion from the analysis.
PO ₃	Communication	communicate effectively on general and scientific topics with the scientific community and with society at large.
PO ₄	Problem Solving	apply knowledge to solve scientific and other chemistry related problems.
PO ₅	Individual and Team Work	learn and work effectively as an individual, and as a member or leader of teams in diverse, multidisciplinary settings.
PO ₆	Investigation of Problems	critically think and apply to analytical reasoning and research based knowledge including design of experiments, analysis and interpretation of data to provide conclusions.
PO ₇	Modern Tool usage	use and learn techniques, skills and modern tools for scientific practices.
PO ₈	Science and Society	apply reasoning to assess the different issues related to society and the consequent responsibilities relevant to the professional scientific practices.
PO ₉	Life-Long Learning	apply knowledge and skills that are necessary for participating in learning activities throughout life.
PO ₁₀	Ethics	identify and apply ethical issues related to one's work; avoid unethical behaviour such as fabrication of data, committing plagiarism and unbiased truthful actions in all aspects of work.
PO ₁₁	Project Management	demonstrate knowledge and understanding of the scientific principles and apply these to manage projects.
PO ₁₂	Environment and sustainability	solve environmental problems related to chemistry

AKSUniversity

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

Program Specific Outcomes(PSO's)

The program specific outcomes (PSO's) are the statement of competencies /abilities that describes the knowledge and capabilities of the post-graduate will have by the end of program studies.

After successful completion of M. Sc. Chemistry, the students will be able to

PSO ₁	Deliver detailed functional knowledge of theoretical concepts and experimental aspects of chemistry.
PSO ₂	integrate the gained knowledge with various contemporary and evolving areas in chemical sciences like analytical, synthetic, pharmaceutical etc.
PSO ₃	understand, analyze, plan and implement qualitative as well as quantitative analytical synthetic and phenomenon-based problems in chemical sciences.
PSO ₄	Provide opportunities to excel in academics, research or Industry by research based innovative knowledge for sustainable development in chemical science

Consistency/Mapping of PEOs with Mission of the Department

PEO	M1	M2	M3	M4
PEO1	3	2	3	2
PEO2	2	2	2	3
PEO3	2	3	2	1
PEO4	2	2	3	3

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) “-” : No correlation

GENERAL COURSE STRUCTURE & THEME

Definition of Credit

1Hr.Lecture(L)per weekx15	1Credit
1Hr.Tutorial (T)per week	1Credit
2 Hours Practical (P) perweek	1 Credit

Range of Credits:

In the light of the fact that a typical Model Two-year Post Graduate degree program in Basic Science has about 100

AKSUniversity

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

credits, the total number of credits proposed for the M.Sc. in Chemistry is kept as 107 considering NEP-20 and UGC guidelines.

Structure of PG Program in Chemistry

The structure of M.Sc. program in Chemistry shall have essentially the following categories of courses with the breakup of credits as given:

Components of the Curriculum

(Program curriculum grouping based on course components)

SINo	Course Component	% of total number of credits of the Program	Total number of Credits
1	Discipline Core Course (DCC)	81.31	87
2	Foundation Course (FC) Chemistry Based	7.48	08
4	Elective course	7.48	08
5	Open elective course	3.73	04
6	Audit Course	0.00	0
7	MOOC**/NTPL/SWYAM	0	0
Total		100	107

Induction Program

Induction program for students to be offered right at the start of the first year It is mandatory. AKS University has design an induction programfor1styear student, detailsare below:

1. Physical activity
2. Creative Arts
3. Universal Human Values
4. Literary
5. Proficiency Modules
6. Lectures by Eminent People
7. Visits to local Areas
8. Familiarization to Dept./Branch & Innovations

Mandatory Visits/ Workshop /Expert Lectures:

1. It is mandatory to arrange one industrial visit every semester for the students.
2. It is mandatory to conducta One-week workshop during the winter break after fifth semester on professional/industry/entrepreneurial orientation.
3. It is mandatory to organize at least one expert lecture persemester for each branch by inviting resource persons from industry.

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

Semester I

Course Name: Inorganic Chemistry I

No. Of Credits: 4

L T P
3 1 0

Pre-requisite: Students must have fundamental knowledge of coordination complexes such as IUPAC nomenclature, Valence Bond Theory (VBT), Crystal Field Theory (CFT).

Rationale: The students studying inorganic chemistry should possess foundational understanding about VBT, CFT, structure, reactions and stereochemistry of inorganic compounds. This will provide applicable knowledge about Nature of bonding in inorganic compounds, stereochemistry of inorganic compounds, structure reactivity, and reaction mechanisms.

Course Outcomes:

After the completion of this course, the learner will

76CH101.1: Explain hybridization as well as $d\pi$ - $p\pi$ bonds and also compare the bond angle of molecules of main group compounds.

76CH101.2: Analyze metal ligand equilibrium in solution on the basis of factors affecting the stability of the complexes as well as determine the stability constant of complexes.

76CH101.3: Apply crystal field theory and molecular orbital theory for the stability of the complexes

76CH101.4: Apply mechanistic details of reaction of transition metal complexes and inertness, lability of complexes.

76CH101.5: Explain π -metal complexes, their spectra, structure and reactions including dinitrogen and dioxygen complexes.

Unit- I

Stereochemistry and Bonding in Main Group Compounds: VSEPR Theory and its application for treating structures of inorganic molecules and ions containing lone pairs of electrons, shortcomings of VSEPR model., Walsh diagrams (tri- and penta- atomic molecules), dp - pp bonds. Bent rule and energetics of hybridization.

Unit-II

Metal-Ligand Equilibria in Solution: Stepwise and overall formation constants and their interaction, trends in stepwise constants, factors affecting the stability of metal complexes with reference to the nature of metal ion and ligand, chelate effect and its thermodynamic origin, determination of binary formation constants by pH-metry and spectrophotometry.

Unit-III

Metal - Ligand Bonding: Applications & Limitations of Crystal field theory, Molecular orbital theory, octahedral, tetrahedral and square planer complexes, p bonding and molecular orbital theory (MOT).

AKSUniversity

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

Unit-IV

Reaction Mechanism of Transition Metal Complexes: Energy profile diagram of reaction, reactivity of metal complexes, Inert and labile complexes, interpretation of lability and inertness of transition metal complexes on the basis of valence bond and crystal field theories. Kinetics of octahedral substitution: acid hydrolysis, factors affecting acid hydrolysis.

Unit-V

Metal p-Complexes: Metal carbonyls, structure and bonding, Vibrational spectra of metal carbonyls for bonding and structural elucidation & important reactions of metal carbonyls; dinitrogen and di oxygen complexes Metal nitrosyls: preparation, bonding structure and important reactions of transition metal nitrosyl; Nitrosylating agents for synthesis of metal nitrosyls, vibrational spectra of metal nitrosyls for bonding and structure elucidation.

Scheme of Studies

Board of Study	Course Code	Course Title	Scheme of studies (Hours/Week)					Total Credits(C)
			CI	LI	S W	SL	Total Study Hours(CI+LI+SW+SL)	
Program Core(PCC)	76CH101	Inorganic Chemistry-I	3	0	1	1	5	4

Legend : **CI:**Class room Instruction (Includes different instructional strategies i.e. Lecture(L) and Tutorial (T)and others),

LI: Laboratory Instruction (Includes Practical performances in laboratory workshop, field or other locations using different instructional strategies)

SW: Sessional Work (includes assignment, seminar, miniproject etc.),

SL: Self Learning,

C: Credits.

Note: SW & SL has to be planned and performed under the continuous guidance and feedback of teacher to ensure outcome of Learning.

AKSUniversity

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

Scheme of Assessment: Theory

Board of Study	Course Code	Course Title	Scheme of Assessment (Marks)						
			Progressive Assessment (RA)					End Semester Assessment (ESA)	Total Marks (PRA+ESA)
			Class/HomeAssignment number 3 marks each (CA)	Class Test (2 best out of 3) 10 marks each (CT)	Seminar one + Class activity	Class Attendance (AT)	Total Marks (CA+CT+SA +AT)		
PCC	76CH101	Inorganic Chemistry I	15	20	10	5	50	50	100

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

Unit- I

Stereochemistry and Bonding in Main Group Compounds: VSEPR Theory and its application for treating structures of inorganic molecules and ions containing lone pairs of electrons, shortcomings of VSEPR model., Walsh diagrams (tri- and penta- atomic molecules), dp-pp bonds. Bent rule and energetics of hybridization

Activity	AppX Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

AKSUniversity

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

Session Outcomes (SOs)	LI	CI	SL
SO1.1 Students understood about the geometry and shape of molecules by using VSEPR theory		1.Introduction to bonding in inorganic molecules 2.VSEPR Theory 3.Application of VSEPR Theory to decide the geometry and shape of inorganic molecules 4. Application of VSEPR Theory to decide the geometry and shape of inorganic ions 5. Limitations of VSEPR Theory 6. Bent's Rule 7.Energetics of Hybridization 8. introduction and examples of d-p pi bonding 9. Walsh diagrams for tri atomic molecules T1. Walsh diagrams penta- atomic molecules T2 Geometry of inorganic molecules T3. Application of Bent rule	Dragos Rule
SO1.2 Students understood about the short coming of VSEPR theory			
SO1.3 Students applied the knowledge of shape of molecule to compare the bond angle			
SO1.4 Understood about the hybridization and apply the same knowledge to calculate the σ - π bonding patterns.			
SO1.5 Students understood that lone pair electrons occupy more space than that of bond pair electrons by using Bent's rule.			

SW-1 Suggested Sessional Work(SW):

Assignments: Draw VSEPR diagram of tri-atomic and Penta-atomic molecule

b. Mini Project: Make a model of shape of given molecules

c. Other Activities (Specify): Write short note Bent's rule

Unit-II

Metal-Ligand Equilibria in Solution: Stepwise and overall formation constants and their interaction, trends in stepwise constants, factors affecting the stability of metal complexes with reference to the nature of metal ion and ligand, chelate effect and its thermodynamic origin, determination of binary formation constants by pH-metry and spectrophotometry.

Activity	AppX Hrs
CI	012
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO2.1 Students understood stepwise and overall formation constants and their interaction		1. Introduction to stepwise and overall formation constants 2. Interaction, trends in stepwise constants	Determination of binary formation constants by pH-metry method

AKSUniversity

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

<p>SO2.2 Students understood different types of factors that affect the stability of metal complexes</p> <p>SO2.3 Students learnt the chelate effect to stabilize the metal complexes</p> <p>SO2.4 Students understood about the determination of binary formation constants by pH-metry and spectrophotometry methods</p>		<ol style="list-style-type: none">3. Factors affecting the stability constant4. Effect of metal ion on stability constant5. Effect of nature of ligands on stability constant6. Effect of chelate effect on stability constant7. Introduction to thermodynamical aspect of stability constant8. Determination of binary formation constants by pH-metry9. Determination of binary formation constants by spectrophotometry. <p>Types of ligands and their structure Calculation of stability constant Principle of spectrophotometry and pH metry</p>

AKSUniversity

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

The written examination of 50 marks will be held at the end of semester for Inorganic Chemistry

Note. Detailed Assessment rubric need to be prepared by the course wise teachers for above tasks. Teachers can also design different tasks as per requirement, for end semester assessment.

Suggested Instructional/Implementation Strategies:

1. Improved Lecture
2. Tutorial
3. Case Method
4. Group Discussion
5. Role Play
6. Visit to NCL, CSIR laboratories
7. Demonstration
8. ICT Based Teaching Learning (Video Demonstration/Tutorials CBT, Blog, Facebook, Twitter, Whatsapp, Mobile, Online sources)
9. Brainstorming

Suggested Learning Resources

Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

Course code: 76CH102

Course Title: Organic Chemistry I

No. of Credits: 4

L	T	P
3	1	0

Pre-requisite: Students should have basic knowledge of chemical bonding, structure, reactions of organic compounds.

Rationale: This course will provide applicable knowledge about Nature of bonding in organic compounds, stereochemistry of organic compounds, reaction mechanisms, structure and reactivity, aliphatic and aromatic nucleophilic substitution.

Course Outcomes:

After the completion of this course, the learner will

76CH102.1: Apply the concept of bonding and aromaticities on existed or newly synthesized organic molecules and explain structure of fullerenes as well as bonds weaker than covalent bond with related compounds

76CH102.2: Explain stereo-chemical terms and inter-convert to stereo-structural formulae of organic molecules analyze configurations, create stereo-structures as well as correlate configuration by applying the concept of chemical correlation.

76CH102.3: Apply mechanistic details of different type's reactions with intermediates, thermodynamic & kinetic requirements and analyse the qualitative and quantitative structure & reactivity relationship in organic chemistry

76CH102.4: Apply mechanistic details of aliphatic nucleophilic substitution reactions and factors affecting reactivity in aliphatic nucleophilic substitution

76CH102.5: Apply the knowledge of the factors affecting reactivity in aromatic nucleophilic substitution to explain mechanisms of different type of aromatic nucleophilic reactions.

UNIT-I: Nature of Bonding in Organic Molecules

Delocalized chemical bonding, conjugation, resonance, hyper-conjugation, bonding in fullerenes, tautomerism. Aromaticity in benzenoid and non benzenoid compounds, alternant and non-alternant hydrocarbons, Huckel's rule, energy level of p-molecular orbitals, annulenes, anti-aromaticity, quasi aromaticity, hydrogen bonding, homo-aromaticity, PMO approach, Bonds weaker than covalent- addition compounds, crown ether complexes and cryptands, inclusion compounds, cyclodextrins.

UNIT II: Stereochemistry

Symmetry elements, D-L, R-S, E-Z and threo-erythro nomenclature, interconversion of Fischer, Newman, Sawhorse and flying wedge formulae. conformational analysis, enantiomerism and diastereomerism of simple, cyclic (chair and boat configuration) and acyclic systems. Axial and planer chirality, optical isomerism in allenes, biphenyls (atropisomerism), spiranes, hemispiranes.

Topicity of ligands and faces, their nomenclature and prostereoisomerism, stereogenicity, chirogenicity, pseudoasymmetry and prochiral centre. stereospecific and stereoselective reaction.

AKSUniversity

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

Elementary idea of principle categories of asymmetric synthesis, Cram's rule and its modification, Prelog rule and horeaus rule.

UNIT-III: Reaction Mechanism: Structure and Reactivity

Types of mechanisms, types of reactions, thermodynamic and kinetic requirements, Transition state and intermediate, Generation, structure, stability and reactivity of carbocations, carbanions, carbenes and nitrenes. effect of structure on reactivity - resonance and field effects, steric effect, quantitative treatment-The Hammett equation and linear free energy relationship, substituent and reaction constants and Taft equation.

UNIT IV: Aliphatic Nucleophilic Substitution

The SN2, SN1, mixed SN1 and SN2 and SET mechanisms. The neighbouring group-mechanism: neighbouring group participations by pi and sigma bonds, anchimeric assistance The SNi mechanism: Nucleophilic substitution at an allylic, aliphatic trigonal and a vinylic carbon. Reactivity: The effects of substrate structure, Attacking nucleophile, Leaving group and Reaction medium; Phase transfer catalysis.

UNIT IV: Aromatic Nucleophilic Substitution

The SNAr, SN1, benzyne and SRN1 mechanisms. Reactivity, effect of substrate structure, leaving group and attacking nucleophile. Bucherer reaction, alkylation, and amination. The Bamberger rearrangement. The von Richter rearrangement. Smiles rearrangement

Scheme of Studies:

COURSE NAME: PHYSICAL CHEMISTRY I

NO. OF CREDITS: 4

L	T	P
3	1	0

Pre-requisite: Students must have fundamental knowledge of quantum mechanics, molecular orbital theory, thermodynamic of chemical process, electrochemical process, catalytic activity and surface chemistry.

Rationale: The students studying physical chemistry will understand and apply foundational thermodynamics of chemical process and basic concept of quantum mechanics. This will provide applicable knowledge about basic concept of quantum mechanics, thermodynamic of chemical process, catalytic activity and surface chemistry and electrochemical aspects to related process.

Course Outcomes:

After the completion of this course, the learner will

76CH103.1: Explain and apply the basic concept of quantum mechanics.

76CH103.2: Apply molecular orbital theory to simple organic molecule.

76CH103.3: Explain and apply thermodynamic of chemical process.

76CH103.4: Explain catalytic activity and surface chemistry

76CH103.5: Apply electrochemical aspects to related process

Unit- I: Quantum Chemistry

The postulates of quantum mechanics, Linear and Hermitian operators. Commutation of operators and Uncertainty Principle. Schrödinger equation, Eigen function and Eigen values, free particle, Schrödinger equation for a particle in a box, the degeneracy, particle in a box with a finite barrier, Schrödinger equation for linear harmonic oscillator and its solution, zero-point energy, Energy levels and wave-functions of Rigid rotator.

Unit- II: Molecular Orbital Theory

Introduction and rule of HMO (Huckel Molecular Orbital) theory, Huckel theory of conjugated systems, bond order and charge density calculations. Applications to ethylene, butadiene, cyclopropenyl radical, cyclobutadiene etc.

Unit- III:

Classical Thermodynamics: Brief resume of concepts of laws of thermodynamics, free energy, chemical potential and entropies. Partial molar properties, partial molar free energy, partial molar volume and partial molar heat content and their significance. Determination of these quantities. Concept of fugacity and determination of fugacity Non-ideal systems: Excess functions for non ideal solutions. Activity and activity coefficient, Debye-Huckel theory for activity coefficient of electrolytic solutions; determination of activity and activity coefficients; ionic strength.

Unit- IV

Surface Chemistry: Surface tension, capillary action, pressure difference across curved surface (Laplace equation), vapour pressure of droplets (Kelvin equation), Gibbs adsorption isotherm, estimation of surface area (BET equation) surface films on liquids (Electro-kinetic phenomenon), catalytic activity at surfaces.

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Unit-V

Electrochemistry: Electrochemistry of solution. Debye-Huckel. Onsager treatment and its extension, ion solvent interactions. Dye-Huckel- Jerum mode. Thermodynamics of electrified interface equations. Derivation of electrocapillarity. Lippmann equations (surface excess), Over potentials, exchange current density, derivation of butler-Volmer equation, Tafel plot. Electro catalysis, Bioelectrochemistry.

Scheme of Studies:

Board of Study	Course Code	Course Title	Scheme of studies (Hours/Week)					Total Credits (C)
			CI	LI	SW	SL	Total Study Hours (CI+LI+SW+SL)	
Program Core (PCC)	76CH103	Physical Chemistry-I	3	0	1	1	5	4

Legend : **CI:** Class room Instruction (Includes different instructional strategies i.e. Lecture (L) and Tutorial (T) and others),

LI: Laboratory Instruction (Includes Practical performances in laboratory workshop, field or other locations using different instructional strategies)

SW: Sessional Work (includes assignment, seminar, mini project etc.),

SL: Self Learning,

C: Credits.

Note: SW & SL has to be planned and performed under the continuous guidance and feedback of teacher to ensure outcome of Learning.

Scheme of Assessment: Theory

Board of Study	Course Code	Course Title	Scheme of Assessment (Marks)						Total Marks (PRA+ESA)
			Progressive Assessment (RA)					End Semester Assessment (ESA)	
			Class/Home Assignment number 3 mark each (CA)	Class Test 2 (2 best out of 3) 10 marks each (CT)	Seminar one + Class activity (SA)	Class Attendance (AT)	Total Marks (CA+CT+SA+AT)		
PCC	76CH103	Physical Chemistry I	15	20	10	5	50	50	100

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

Unit- I (76CH103.1):

Quantum Chemistry;

The postulates of quantum mechanics, Linear and Hermitian operators. Commutation of operators and Uncertainty Principle. Schrödinger equation, Eigen function and Eigen values, free particle, Schrödinger equation for a particle in a box, the degeneracy, particle in a box with a finite barrier, Schrödinger equation for linear harmonic oscillator and its solution, zero-point energy, Energy levels and wave-functions of Rigid rotator.

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Debye-Huckel. Onsager treatment and its extension

c. Other Activities (Specify):

Brief of Hours suggested for the Course Outcome

Course Outcomes	Class Lecture (CI)	Sessional Work (SW)	Self Learning (SI)	Total hour (CI+SW+SI)
76CH103.1: Explain and apply the basic concept of quantum mechanics.	12	02	01	15
76CH103.2: Apply molecular orbital theory to simple organic molecule.	12	02	01	15
76CH103.3: Explain and apply thermodynamic of chemical process.	12	02	01	15
76CH103.4: Explain catalytic activity and surface chemistry	12	02	01	15
76CH103.5: Apply electrochemical aspects to related process	12	02	01	15
Total	60	15	05	75

Suggestion for End Semester Assessment

Suggested Specification Table (For ESA)

CO	Unit Titles	Marks Distribution			Total Marks
		R	U	A	
CO-1	Quantum Chemistry	03	01	01	05
CO-2	Molecular orbital theory	02	06	02	10
CO-3	Classical thermodynamics	03	07	05	15
CO-4	Surface chemistry	-	10	05	15
CO-5	Electro chemistry.	03	02	-	05
Total		11	26	13	50

Legend:

R:Remember, U:Understand,

A:Apply

The end of semester assessment for physical chemistry I will be held with written examination of 50 marks

Note. Detailed Assessment rubric need to be prepared by the course wise teachers for above tasks. Teachers can also design different tasks as per requirement, for end semester assessment.

AKS University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Suggested Instructional/Implementation Strategies

1. Improved Lecture
2. Tutorial
3. Case Method
4. Group Discussion
5. Role Play
6. Visit to NCL, CSIR laboratories
7. Demonstration
8. ICT Based Teaching Learning (Video Demonstration/Tutorials CBT, Blog, Facebook, Twitter, Whatsapp, Mobile, Online sources)
9. Brainstorming

Suggested Learning Resources:

CODE: 76CH104

COURSE NAME: Group theory and Spectroscopy I

NO. OF CREDITS: 4

L	T	P
3	1	0

Pre-requisite: Students should have basic knowledge of symmetry and group theory, electromagnetic radiation, interaction of electromagnetic radiation with matter and spectroscopy.

Rationale: The students studying group theory and spectroscopy should possess foundational understanding about, symmetry, EMR, NMR, PES.

Course Outcomes:

After the completion of this course, the learner will

76CH104.1: Explain and apply the basic concept symmetry and group theory.

76CH104.2: Describe fundamental aspects of spectroscopy and apply the knowledge these aspects on solving problem related to these.

76CH104.3: Apply the basic concept of microwave and its principle

76CH104.4: Explain and apply the principle of atomic spectroscopy and photo electron spectroscopy.

76CH104.5: Apply the knowledge of NMR principle, instrumentation and applications. And apply the knowledge to solve issues related to NMR spectroscopy

Unit-I: Symmetry and Group Theory

Symmetry elements and Symmetry operations, definitions of group, subgroups, relationship between orders of a finite group and its subgroup. Conjugacy relation and classes.

Unit-II: Unifying Principles

Electromagnetic radiation, interaction of electromagnetic radiation with matter –Absorption, emission, transmission, reflection, refraction, dispersion, polarization and scattering. Uncertainty relation and natural line width and natural line broadening, transition probability, results of time dependent perturbation theory, transition moment, selection rules, Intensity of spectral lines, Born Oppenheimer approximation, rotational, Vibrational and electronic levels.

Unit-III: Microwave Spectroscopy

Classification of molecules, rigid rotor model, effect of isotopic substitution on the transition frequencies, intensities, non rigid rotors . Stark effect, nuclear and electron spin interaction and effect of external field.

Unit-IV: Electronic Spectroscopy

A-Atomic Spectroscopy: Energies of atomic orbitals, vector representation of momenta and vector coupling, spectra of hydrogen atoms and alkali metal atoms.

Photo electron spectroscopy: Basic principles, photo-electric effect, ionization process, Koopman's theorem, photo electron spectra of simple molecules.

Unit-V: Nuclear Magnetic Resonance Spectroscopy

Nuclear spin, nuclear resonance, saturation, shielding of magnetic nuclei, chemical shift and its measurements, factors influencing chemical shift, deshielding, spin-spin interactions, factor influencing coupling constant "J". Classification (ABX, AMX, ABC, A2B2, etc.), spin decoupling, basic ideas about instrument..

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

76CH104.1: Explain and apply the basics concept symmetry and group theory.

Approximate Hours

Activity	Apex Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1.1 Restate the concept of symmetry and symmetry elements. SO1.2 Apply concept of symmetry operation on compounds SO1.3 Describe different types of symmetry elements. SO1.4 Discuss about plane of symmetry and its types. SO1.5 Explain and apply the group, sub group and classes of symmetry elements of a molecule.		Unit-1 symmetry and group theory 1.1 Introduction of symmetry 1.2 symmetry elements 1.3 identity 1.4 proper axis of symmetry 1.5 improper axis of symmetry 1.6 plane of symmetry 1.7 in version centre 1.8 symmetry operation 1.9 group and sub group T1 Order of group T2 class of group T3 prediction of symmetry elements of molecules	Prediction of symmetry elements in benzene, PtCl ₄ .

SW-1 Suggested Sessional Work (SW):

a. Assignments:

Discuss the Symmetry elements and Symmetry operations of various types of molecules.

b. Mini Project:

group, subgroups, order of group of symmetry elements.

c. Other Activities (Specify):

Note on relationship between orders of a finite group and its subgroup.

AKS University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

76CH104.2: Describe fundamental aspects of spectroscopy and apply the knowledge these aspects on solving problem related to these.

Activity	AppX Hrs
CI	12

<p>SO2.1 Restate the term electromagnetic radiation.</p> <p>SO2.2 Describe the interaction of electromagnetic radiation with matter with different phenomenon.</p> <p>SO2.3 Discuss transmission, reflection, refraction</p> <p>SO2.4 Explain and apply the phenomenon of scattering and polarization of light, its types and uses.</p> <p>SO2.5 Explain elementary idea Uncertainty relation and natural line width and natural line broadening, transition probability.</p>		<p>Unit-2.0 Unifying Principles</p> <p>2.1 Introduction of EMR</p> <p>2.2 discovery, properties of EMR.</p> <p>2.3 Types of electromagnetic radiation.</p> <p>2.4 Born Oppenheimer approximation.</p> <p>2.5 Interaction of electromagnetic radiation with matter</p> <p>2.6 absorption and emission</p> <p>2.7 Phenomenon's of transmission, reflection and refraction of light</p> <p>2.8 The phenomenon of scattering and polarization of light, its types and uses.</p> <p>2.9 Uncertainty relation and natural line width</p> <p>T1-Natural line broadening, transition probability.</p> <p>T2-Selection rule</p> <p>T3- factors affecting band width broadening.</p>	interaction of electromagnetic radiation with matter

SW-2 Suggested Sessional Work (SW):

A .Assignments:

Discussion of different phenomenon's of electromagnetic radiation interaction with matter.

b. Mini Project:

Natural line width and natural line broadening and factors affecting band width broadening.

c. Other Activities (Specify):

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Write an essay on electromagnetic radiation, interaction of electromagnetic radiation with matter.

76CH104.3: Describe details of classification of molecules, classical model of rigid rotator and analyses effect of isotopic substitution on the transition frequencies, intensities and stark effect.

Activity	AppX Hrs
CI	15
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
<p>SO3.1 Restate classification of molecules, homo and hetroatomic microwave activity.</p> <p>SO3.2 Explain, moment of inertia, kinetic energy and rotational energy of rigid rotator by classical model.</p> <p>SO3.3 Explain selection rule and spectral intensities of rigid rotator.</p> <p>SO3.4 Describe the effect of isotopic substitution on the transition frequencies.</p> <p>SO3.5 Explain and apply stark effect, nuclear and electron spin interaction and effect of external field.</p>		<p>Unit-3.0 Microwave Spectroscopy</p> <p>3.1 Classification of molecules</p> <p>3.2 homo and hetroatomic molecules</p> <p>3.3 microwave activity</p> <p>3.4 Moment of inertia of rigid rotator.</p> <p>3.5 kinetic energy of rigid rotator.</p> <p>3.6 rotational energy of rigid rotator by classical model</p> <p>3.7 Mathematical derivation of rigid rotator by classical model</p> <p>3.8 selection rule and spectral intensities of rigid rotator.</p> <p>3.9 effect of isotopic substitution on the transition frequencies.</p> <p>T1 stark effect</p> <p>T2 Types of stark effect,</p> <p>T3 nuclear and electron spin interaction and effect of external field.</p>	<p>Microwave activity of different molecules.</p>

SW-3 Suggested Sessional Work (SW):

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

a. Assignments:

Isotopic substitution on the transition frequencies.

b. Mini Project:

Stark effect, nuclear and electron spin interaction and effect of external field.

c. Other Activities (Specify):

Explanatory note on importance of Microwave Spectroscopy

76CH104.4: Explain energies of atomic orbital's, vector representation of momenta and vector coupling, spectra of hydrogen atoms and Photo electron spectroscopy

Activity	AppX Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
<p>SO4.1 Explain and apply about Atomic Spectroscopy, Energies of atomic orbital's, vibronic transition.</p> <p>SO4.2 Restate vector coupling of electron of atom and vector representation of momenta</p> <p>SO4.3 Describe the spectra of hydrogen atoms with spectral lines and importance.</p> <p>SO4.4 Discuss Photo electron spectroscopy- Basic principles, mechanism of photoelectric effect.</p> <p>SO4.5 Explain and apply instrumentation of photo electron spectrometer and its application</p>		<p>Unit-4.0 Atomic Spectroscopy</p> <p>4.1 Energies of atomic orbital's</p> <p>4.2 electronic transition,</p> <p>4.3 frank Condon principle.</p> <p>4.4 vector representation of momenta</p> <p>4.5 vector coupling of electron of atom.</p> <p>4.6 The spectra of hydrogen atoms with spectral lines and importance.</p> <p>4.7 Photo electron spectroscopy-</p> <p>4.8 Types of PES, Basic principles,</p> <p>4.9 mechanism of photoelectric effect, ionization process.</p> <p>T1 Instrumentation of photo electron spectrometer</p> <p>T2 its application.</p> <p>T3 PES Spectra of molecules</p>	Types of electronic transition and vibronic transition.

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Suggested Sessional Work (SW):

a. Assignments:

Spectra of hydrogen atom and spectral line with importance.

b. Mini Project:

Vector representation of momenta and vector coupling of electron of atom.

b. Other Activities (Specify):

Importance and applications of photo electron spectroscopy.

76CH104.5: Apply the knowledge of the Nuclear Magnetic Resonance Spectroscopy, NMR activity, chemical shift and its measurements, factors influencing chemical shift, spin-spin interactions, basic ideas about instrument.

Activity	AppX Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
<p>SO5.1 Explain and apply the introduction of NMR, Nuclear spin, nuclear resonance</p> <p>SO5.2 Describe shielding and deshielding of magnetic nuclei.</p> <p>SO5.3 Restate chemical shift, delta value and its measurements and factors influencing chemical shift,</p> <p>SO5.4 Discuss spin-spin interactions, factor influencing coupling constant.</p> <p>SO5.5 Restate spins decoupling and basic ideas about instrumentation of NMR spectrophotometer.</p>		<p>Unit-5.0 Nuclear Magnetic Resonance Spectroscopy.</p> <p>5.1 introduction of NMR.</p> <p>5.2 Nuclear spin quantum number</p> <p>5.3 NMR activity, nuclear resonance</p> <p>5.4 Shielding and deshielding of magnetic nuclei.</p> <p>5.5 chemical shift, delta value and TMS scale.</p> <p>5.6 delta value and its measurements</p> <p>5.7 factors influencing chemical shift.</p> <p>5.8 spin-spin interactions,</p> <p>5.9 Factor influencing coupling constant "J"</p> <p>T1-Classification (ABX, AMX, ABC, A2B2 etc.)</p> <p>T2 Spin decoupling and basic ideas about it.</p> <p>T3-Instrumentation of NMR spectrophotometer.</p>	<p>Chemical shift and its measurements of different organic compound.</p>

AKS University
Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

SW-5 Suggested Sessional Work (SW):

a. Assignments:

Chemical shift and its measurements of different organic compound.

c. Mini Project:

Spin-spin interactions and coupling constant "J" for (ABX, AMX, ABC, A2B2, etc.),

d. Other Activities (Specify):

Basic ideas about instrumentation of NMR spectrophotometer.

Brief of Hours suggested for the Course Outcome

NO. OF CREDITS: 3

L	T	P
1	3	0

Pre-requisite: Students must have fundamental knowledge of mathematical aspects, vectors, Differential Calculus, Permutation, Probability, Logarithm & Integral calculus, Elementary Differential equations, Matrices and Determinants.

Rationale: The students studying Mathematics for Chemist should possess foundational understanding about mathematical aspects, vectors, Differential Calculus, Permutation, Probability, Logarithm & Integral calculus, Elementary Differential equations, Matrices and Determinants.

COURSE OUT COMES:

After the completion of this course, the learner will

76CH105.1: Explain Matrix and Vectors Algebra.

76CH105.2: Apply Differential Calculus.

76CH105.3: Apply Integral calculus.

76CH105.4: Discuss Differential equations.

76CH105.5: Explain Fundamentals of Permutation and Probability with applications.

Unit I: Vectors:

Examples of scalar and vectors, definitions of vectors in two, three spaces, representation and simple properties of vectors, addition and subtraction of vectors, vector addition by the method of triangles, resolution of vectors into rectangular components, addition of vectors by components, multiplication and differentiation of vectors. Scalar product of vectors, vector product.

Matrices: Definition of matrix, types of matrices, viz. row matrix, column matrix, null matrix, square matrix, diagonal matrix, addition, subtraction and multiplication by a number, matrix multiplication. Transpose and adjoint of matrix,

Unit II: Differential Calculus

Functions, continuity and differentiability, rules for differentiation, applications of differential calculus including maxima and minima (examples related to maximally populated rotational energy levels, Bohr's radius and most probable velocity from Maxwell's distribution etc.).

Unit III: Logarithm & Integral calculus.

Logarithm, Graphical Representation of Equations, formulas for integration, integration by parts, partial fractions and substitution. Reduction formulae, applications of integral calculus. Functions of several variables, partial differentiation, co-ordinate transformations (e.g. Cartesian to spherical polar).

Unit IV: Elementary Differential equations

First-order and first degree differential equations, homogenous, exact and linear equations. Applications to chemical kinetics, secular equilibria, quantum chemistry etc. second order differential equation and their applications.

Unit V: Permutation and Probability

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Permutations and combinations, probability and probability theorems average, variance and root means square deviation. Examples from the kinetic theory of gases including least squares fit .

Scheme of Studies:

Board of Study	Course Code	Course Title	Scheme of studies (Hours/Week)					Total Credits (C)
			CI	LI	SW	SL	Total Study Hours (CI+LI+SW+SL)	
Program Core (ECC)	76CH105	Mathematics for Chemist	3	0	1	1	5	4

Legend : **CI:** Class room Instruction (Includes different instructional strategies i.e. Lecture (L) and Tutorial (T) and others),
LI: Laboratory Instruction (Includes Practical performances in laboratory workshop, field or other locations using different instructional strategies)
SW: Sessional Work (includes assignment, seminar, mini project etc.),
SL: Self Learning,
C: Credits.

Note:

SW & SL has to be planned and performed under the continuous guidance and feedback of teacher to ensure outcome of Learning.

Scheme of Assessment: Theory

Board of Study	Course Code	Course Title	Scheme of Assessment (Marks)						End Semester Assessment (ESA)	Total Marks (PRA+ESA)
			Progressive Assessment (RA)							
			Class/Home Assignment Number 3 mark each (CA)	Class Test 2 (2 best out of 3) 10 mark each (CT)	Seminar + Class activity	Class Attendance (AT)	Total Marks (CA+CT+SA+AT)			
BCC	76CH105	Mathematics for Chemist	15	20	10	5	50	50	100	

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

AKS University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Unit- I (76CH105.1):

Vectors: Examples of scalar and vectors, definitions of vectors in two, three spaces, representation and simple properties of vectors, addition and subtraction of vectors, vector addition by the method of triangles, resolution of vectors into rectangular components, addition of vectors by components, multiplication and differentiation of vectors. Scalar product of vectors, vector product.

Matrices: Definition of matrix, types of matrices, viz. row matrix, column matrix, null matrix, square matrix, diagonal matrix, addition, subtraction and multiplication by a number, matrix multiplication. Transpose and adjoint of matrix,

CODE: 76CH105

COURSE NAME: Biology for Chemist

NO. OF CREDITS: 3

L T P

3 0 0

Pre-requisite: Students should have basic knowledge of Introduction to metabolic processes, cycle of living beings, carbohydrates and their importance, protein structure, Lipids, genetic engineering.

Rationale: The students studying biology chemistry should possess foundational understanding about metabolism processes, protein structure, carbohydrates and their importance. This will provide applicable knowledge about metabolism and energy cycle of living beings, Predict biochemistry of any metabolism, protein structure and amino acid, genetic code.

COURSE OUTCOMES:

After the completion of this course, the learner will:

76CH105.1: Explain the metabolism and energy cycle of living beings.

76CH105.2: Explain carbohydrates and their importance for living beings

76CH105.3: Predict biochemistry of any metabolism

76CH105.4: Solve problems related protein structure and amino acid sequence in protein

76CH105.5: Solve problem related genetic engineering.

UNIT: I

Introduction to metabolic processes: Origin of life – unique properties of carbon, chemical evolution and rise of living systems, structure of prokaryotic and eukaryotic cells, and cell organelles, catabolism and anabolism, ATP, currency of biological energy, energy rich and energy poor phosphates, role of NADH, NADPH, FADH₂, TPP, coenzyme A, lipoic acid and biotin. Introduction to photosynthesis.

UNIT: II

Carbohydrates

Structure (excluding conformational analysis) and biological functions of monosaccharides (glucose, fructose and galactose) and their derivatives like glycosides, deoxy sugars, myoinositol. Disaccharides- sucrose, lactose and maltose.

Structure and biological functions of Structural polysaccharides (cellulose and chitin) and Storage polysaccharides (starch and glycogen) Heteropolysaccharides-Glucosaminoglycans / mucopolysaccharides.

UNIT: III

Lipids: Fatty acids, essential fatty acids, structure and function of triacylglycerols, glycerophospholipids, sphingolipids, cholesterol, bile acids, prostaglandins. Lipoproteins - composition and function, role in atherosclerosis.

Lipid metabolism - β -oxidation of fatty acids.

UNIT IV

Amino acids, Peptides and Proteins Chemical and enzymatic hydrolysis of proteins to peptides, amino and sequencing. Secondary structure of proteins, forces responsible for holding of secondary structures, α -helix, β -

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

sheets, super secondary structure, triple helix structure of collagen. Tertiary structures of proteins- folding and domain structures.. Amino acid metabolism – degradation and biosynthesis of amino acids, sequence determination: chemical / enzymatic / mass spectral, racemization/ detection.

UNIT V

Nucleic Acids and Genetic Code: Structure of nucleotides, nucleosides, DNA (Watson-Crick model) and RNA, Replication of DNA (semi-conservative, conservative and dispersive replication Meselson-Stahl experiment), transcription, translation of genetic material, genetic code, universality of the code, codon, anticodon pairing.

1. Principles of Biochemistry, A.L. Lehninger, Worth Publishers.
2. Biochemistry, L.Stryer, W.H. Freeman.
3. Biochemistry, J. David Rawn, Neil Patterson.
4. Biochemistry, Voet and Voet, John Wiley.
5. Outlines of Biochemistry, E.E. Connand P.K. Stumpf, John Wiley.

Scheme of Studies:

CO-5	Nucleic Acids and Genetic Code	03	02	-	05
Total		11	26	13	50

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Legend: R:Remember, U:Understand, A:Apply

The end of semester Assessment for Organic Chemistry I will be held with written examination of 50 marks.

Note. Detailed Assessment rubric need to be prepared by the course wise teachers for above tasks. Teachers can also design different tasks as per requirement, for end semester assessment.

Suggested Instructional/Implementation Strategies:

1. Improved Lecture
2. Tutorial
3. Case Method
4. Group Discussion
5. Role Play
6. Visit to NCL, CSIR laboratories
7. Demonstration
8. ICT Based Teaching Learning (Video Demonstration/Tutorials CBT, Blog, Facebook, Twitter, Whatsapp, Mobile, Online sources)

Brainstorming

Suggested Learning Resources:

(a) Books:

CODE: 76CH-151

Course Name: Inorganic Chemistry Lab-

No. Of Credits: 2

L T P
0 0 2

Pre-requisite: Students should have basic knowledge of Laboratory safety as well as inorganic mixture analysis.

Rationale: This course provides skill in synthesis of inorganic compounds and inorganic mixture analysis.

COURSE OUTCOMES

After the completion of this course, the learner will:

CO1: Analyze inorganic mixture qualitatively

CO2: Analyze inorganic mixture containing less common salts

CO3: Analyze inorganic mixture containing insoluble salts

CO4: Synthesize simple inorganic complex compounds.

CO5. Estimate metallic ions in solution volumetrically

Unit I: Qualitative Analysis I: Inorganic mixture analysis (without insoluble and less common salts)

Unit II: Qualitative Analysis II: Inorganic mixture analysis with less common salts

Unit III: Qualitative Analysis III: Separation of inorganic mixture using chromatography

Unit IV: Inorganic Complex Synthesis I: $[\text{Cu}(\text{NH}_3)_4] \text{SO}_4$, $[\text{Ni}(\text{NH}_3)_6] \text{Cl}_2$

Unit V: Quantitative Analysis: Volumetric Analysis (Estimation of Cu and Ni)

Scheme of Studies:

Board of Study	Course Code	Course Title	Scheme of studies (Hours/Week)					Total Credits (C)
			CI	LI	SW	SL	Total Study Hours CI+LI (2hr) + SW + SL	
Program Core (PCC)	76CH-151	Inorganic Chemistry I	0	2	1	1	6	2

Legend:

- CI:** Class room Instruction (Includes different instructional strategies i.e. Lecture(L) and Tutorial (T) and others),
- LI:** Laboratory Instruction (Includes Practical performances in laboratory workshop, field or other locations using different instructional strategies)
- SW:** Sessional Work (include assignment, seminar, miniproject etc.),
- SL:** Self Learning,
- C:** Credits.

Note: SW & SL has to be planned and performed under the continuous guidance and feedback of teacher to ensure outcome of Learning.

Course Code: 76ch152
Course Title: Organic Chemistry Lab I
No. Of Credits: 2

P	L	T
2	0	0

Pre-requisite: Students should have basic knowledge of Laboratory safety as well as qualitative and quantitative analysis.

Rationale: This course provides skill in synthesis of organic compounds and qualitative and quantitative organic analysis.

Course Outcomes: After the completion of this course, the learner will:

76CH152.1: Analyse a given mixture of mono functional organic compounds qualitatively in laboratory.

76CH152.2: Analyse the mixture of bi functional organic compounds

76CH152.3: Synthesize various organic compounds via single step in laboratory

76CH152.4: Synthesize organic compounds via two steps.

76CH152.5: Analyse the given oil fat quantitatively and qualitatively

Unit 1 Qualitative Organic analysis I

Qualitative analysis of mixture of mono functional compounds

Unit 2 Qualitative Organic analysis II

Qualitative analysis of mixture of bifunctional compounds

Unit 3 Synthesis I

Synthesis of organic compounds involving some of the following reactions: acylation reaction, aldol condensation

Unit 4 Synthesis II

Condensation reaction, Diazotization reactions.

Unit 5 Quantitative analysis

Analysis of oil and fat

AKS University
Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Course Code: 76ch153
Course Title: Physical Chemistry Lab I
No. Of Credits: 2

P	L	T
2	0	0

Pre-requisite: Students should have basic knowledge of Laboratory safety as well as Conductometry, pH-metry, Surface Chemistry and chemical kinetics.

Rationale: This course provide skill in knowledge of Laboratory safety as well as Conductometry, pH-metry, Surface Chemistry and chemical kinetics.

Course Outcomes: After the completion of this course, the learner will:

76CH153.1: Handle electrodes and conductivity meter to perform physical property analysis.

76CH153.2: Determine rate and estimate molecular mass of polymer system.

76CH153.3: Determine rate constant for various chemical reactions.

76CH153.4: Analyze the viscosity of liquids using Ostwald viscometer.

76CH153.5: Handle pH meter to perform physical property analysis.

Unit I Conductometry I

1- Determine the strength of strong acid by conductometric titration with strong base.

2- Determine the strength of weak acid by conductometric titration with strong base.

Unit II Conductometry II

3- Study precipitation titration between KCl and AgNO₃ conductometrically.

4- Determine the basicity of mono-, di-, and tri-basic acid conductometrically.

5- Determine the strength of strong acid and weak acid in a mixture by conductometric titration with strong base.

6- Determine solubility and solubility product of sparingly soluble salts like PbSO₄, BaSO₄.

Unit III pH-metry

7- Determine the strength of strong acid by pH-metric titration with strong base.

8- Determine the strength of weak acid by pH-metric titration with strong base.

Unit IV Chemical Kinetics

8- Study the hydrolysis of methyl acetate in presence of hydrochloric acid.

9- Study saponification of ethyl acetate by sodium hydroxide solution taking the initial concentration of ester and base to be different.

Unit V

Surface Chemistry

10- Determine the viscosity of liquids (environment friendly) using Ostwald viscometer.

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Study the variation of viscosity with concentration for a glycerol

Scheme of Studies:

Course-Curriculum Detailing:

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including, Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

76CH 151 .1 Unit I Conductometry I

- 1-Determine the strength of strong acid by conductometric titration with strong base.
- 2-Determine the strength of weak acid by conductometric titration with strong base.

Activity	AppX Hrs
LI	2
SW	1
SL	1
Total	4

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1 Analyse binary mixture of organic compounds	1.1-Determine the strength of strong acid by conductometric titration with strong base.		Determine solubility and solubility product of sparingly soluble salts like PbSO ₄ , BaSO ₄
SO2 Analyse binary mixture of organic compounds by utilizing different solvents	1.2-Determine the strength of weak acid by conductometric titration with strong base.		

SW-1 Suggested Sessional Work (SW):

a. Assignments:

Determine the strength of mixture of acid by conductometric titration.

76CH153.2: Unit II Conductometry II

- 3-Study precipitation titration between KCl and AgNO₃ conductometrically.
- 4-Determine the basicity of mono-, di-, and tri-basic acids conductometrically.
- 5-Determine the strength of strong acid and weak acid in a mixture by conductometric titration with strong base.
- 6-Determine solubility and solubility product of sparingly soluble salts like PbSO₄, BaSO₄.

Activity	AppX Hrs
LI	2
SW	1

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1 Analyse precipitation titration between KCl and AgNO ₃ conductometrically SO2 Analyse the strength of strong acid and weak acid in a mixture by conductometric titration with strong base. Analyse solubility and solubility product of sparingly soluble salts like PbSO ₄ , BaSO ₄ .	2.1-Study precipitation titration between KCl and AgNO ₃ conductometrically. 2.2-Determine the basicity of mono-, di-, and tri-basic acids conductometrically. 2.3-Determine the strength of strong acid and weak acid in a mixture by conductometric titration with strong base. 2.4-Determine solubility and solubility product of sparingly soluble salts like PbSO ₄ , BaSO ₄ .		Calibration of conductivity meter

SW-2 Suggested Sessional Work (SW):

a. Assignments:

Calibration of conductivity meter

76CH153.3: Unit III pH-metry

7-Determine the strength of strong acid by pH-metric titration with strong base.

8-Determine the strength of weak acid by pH-metric titration with strong base.

Activity	AppX Hrs
LI	2 (2hr.each)
SW	1
SL	1
Total	4

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1 Analyze the strength of strong acid by pH-metric titration with strong base SO2 Analyze the strength of strong acid by pH-metric titration with strong base.	1-Determine the strength of strong acid by pH-metric titration with strong base. 3.2-Determine the strength of weak acid by pH-metric titration with strong base.		Approach Of Synthesis Of Dibenzalacetone

AKS University
Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

SW-3 Suggested Sessional Work (SW):

a. Assignments:

Discuss mechanistic approach of synthesis of dibenzalacetone

76CH152.4: Unit IV
Chemical Kinetics

8- Study the hydrolysis of methyl acetate in presence of hydrochloric acid.

9 Study saponification of ethyl acetate by sodium hydroxide solution taking the initial concentration of ester and base to be different

Activity	AppX Hrs
LI	2 (2hr each)
SW	1
SL	1
Total	4

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1 Synthesize organic compounds via two steps SO2 Synthesize organic compounds by aceto acetic ester condensation	4.1-Study the hydrolysis of methyl acetate in presence of hydrochloric acid. 4.2-Study saponification of ethyl acetate by sodium hydroxide solution taking the initial concentration of ester and base to be different.		Calibration of Ph meter

SW-4 Suggested Sessional Work (SW):

a. Assignments:

Calibration of Ph meter

76CH152.5: Unit V
Surface Chemistry

10-Determine the viscosity of liquids (environment friendly) using Ostwald viscometer.

Study the variation of viscosity with concentration for a glycerol

Activity	AppX Hrs
LI	2 (2hr each)
SW	1
SL	1

AKS University

AKS University
Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

M.Sc. Chemistry Semester II
Code: 76CH-201
Course Name: Inorganic Chemistry II

L	T	P
3	1	0

Pre-requisite: Students must have fundamental knowledge of coordination complexes such as IUPAC nomenclature, Valence Bond Theory (VBT), Crystal Field Theory (CFT), molecular orbital theory etc.

Rationale: The students studying inorganic chemistry should possess foundational understanding about VBT, CFT, molecular orbital theory, structure, reactions and stereochemistry of inorganic compounds. This will provide applicable knowledge about Nature of bonding in inorganic compounds, stereochemistry of inorganic compounds, structure reactivity, and reaction mechanisms.

Course Outcomes

After the completion of this course, the learner will:

76CH-201.1: Explain the correlation of spectroscopic terms and apply the knowledge to interpret the spectra and draw the Orgel energy level diagram for transition metal complexes.

76CH-201.2: Describe the mechanism of substitution reactions in square planar complexes and interprets them with different types of factors.

76CH-201.3: Apply the knowledge of electronic spectra to determine the crystal field splitting energy (Dq), Racah parameter (B) and Nephelauxetic ratio (β) for d^3 , d^7 and d^8 complexes.

76CH-201.4: Apply the knowledge of optical activity for optical rotator dispersion (ORD) and Cotton effect.

76CH-201.5: Explain borane chemistry and structure and properties metal clusters.

Unit I (76CH-201.1): Electronic Spectra of Transition Metal Complexes

Spectroscopic term, terms and microstates for the p^2 and d^2 configurations, Hund's rules for ground state terms, the correlation of spectroscopic terms into Mulliken symbols, electronic transition selection rules, Orgel diagrams for transition metal complexes (d^1 - d^9 states). Jahn-teller effect and electronic spectra of complexes.

UNIT II (76CH-201.2): Reaction Mechanism of Transition Metal Complexes

Base hydrolysis, conjugate base mechanism, direct and indirect evidences in favor of conjugate mechanism. Substitution reactions in square planar complexes: The Trans effect and the *trans* influence: Polarization and π -Bonding theories, applications of Trans effect in synthesis, Kurnakove's test of distinguishing *cis* and *trans* isomers using the concept of trans effect, mechanism of substitution reactions in square planar complexes, factors affecting substitution reactions. Acquaintance of Trans effect in octahedral complexes

UNIT III (76CH-201.3): Metal-Ligand Bonding

Electronic Spectra and Magnetic Properties of Transition Metal Complexes Calculations of Dq , B (Racah parameter) and β (Nephelauxetic ratio) parameters for Cr(III), Co(II) and Ni(II) complexes using electronic spectral data. Charge transfer spectra: ligand to metal and metal to ligand.

UNIT IV (76CH-201.4): Circular Dichroism and Optical Rotatory Dispersion

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Polarized light, fundamental symmetry requirements, for optical activity, interaction of polarized light with optically active matter, optical rotation, Cotton effect, configuration of Tris-chelated complexes.

UNIT V (76CH-201.5): Borane Chemistry Metal Clusters

Bonding and topology of boranes, 4-digit coding (s, t, y, x) numbers for B₂H₆, B₄H₁₀, B₅H₉, B₅H₁₁ and B₆H₁₀ and their utilities. Acquaintance with carboranes and metallocarboranes. Metal clusters: synthesis, reactivity and bonding.

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

activity		curves	
SO4.4 Introduced to Cotton effect		T2. Absolute configuration by CD curves	
SO4.5 Understood the configuration of Tris -chelated complexes		T3. Principles of polarimetry	

SW-4 Suggested Sessional Work (SW)

- Assignment:** Optical activity
- Mini Project:** configuration of Tris -chelated complexes.
- Other Activities (Specify):** Plane polarized light

UNIT V (76CH-201.5): Borane Chemistry Metal Clusters

Bonding and topology of boranes, 4-digit coding (s, t, y, x) numbers for B_2H_6 , B_4H_{10} , B_5H_9 , B_5H_{11} and B_6H_{10} and their utilities. Acquaintance with carboranes and metallo-carboranes. Metal clusters: synthesis, reactivity and bonding.

Activity	AppX Hrs
Cl	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
<p>SO5.1 Understood the Bonding and topology of boranes</p> <p>SO5.2 Understood the concept of 4-digit coding (s, t, y, x) numbers for B_2H_6, B_4H_{10}, B_5H_9, B_5H_{11} and B_6H_{10}.</p> <p>SO5.3 Apply the concept of isolobal analogy for carboranes and metallocarboranes</p> <p>SO5.4 Understood the synthesis of metal clusters</p> <p>SO5.5 Applied the concept reactivity and bonding patterns of metal cluster</p>		<p>1. Bonding in boranes</p> <p>2. topology in boranes</p> <p>2.4-digit coding (s, t, y, x) numbers and bonding for B_2H_6</p> <p>3.4-digit coding (s, t, y, x) numbers and bonding for B_4H_{10}</p> <p>4.4-digit coding (s, t, y, x) numbers and bonding for B_5H_9</p> <p>5. 4-digit coding (s, t, y, x) numbers and bonding for B_5H_{11}</p> <p>6.4-digit coding (s, t, y, x) numbers and bonding for B_6H_{10} and their utilities</p> <p>7. Acquaintance with carboranes</p> <p>8. Acquaintance with metallo-</p>	<p>Metal clusters: synthesis, reactivity and bonding.</p>

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

		carboranes 9. Synthesis of metal cluster T1. Reactivity and bonding of metal clusters T2. Applications of metal cluster T3. Synthetic applications of boranes	
--	--	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--

SW-5 Suggested Sessional Work (SW):

Assignments: Importance of 4-digit coding (s, t, y, x) numbers for B_2H_6 , B_4H_{10} , B_5H_9 , B_5H_{11} and B_6H_{10} to determine the bonding patterns and structure

Mini Project: Metallocarboranes

Other Activities (Specify): Reactivity of metal cluster

Brief of Hours suggested for the Course Outcome

Course Outcomes	Class Lecture (Cl)	Sessional Work (SW)	Self Learning (SI)	Total hour (Cl+ SW+ SI)
76CH-201.1: Electronic Spectra of Transition Metal Complexes: Spectroscopic term, terms and microstates for the p^2 and d^2 configurations, Hund's rules for ground state terms, the correlation of spectroscopic terms into Mulliken symbols, electronic transition selection rules, Orgel diagrams for transition metal complexes (d^1 - d^9 states). Jahn-teller effect and electronic spectra of complexes.	12	02	01	15
76CH-201.2: Reaction Mechanism of Transition Metal Complexes: Base hydrolysis, conjugate base mechanism, direct and indirect evidences in favor of conjugate mechanism. Substitution reactions in square planar complexes: The Trans effect and the <i>trans</i> influence: Polarization and p-Bonding theories, applications of Trans effect in synthesis, Kurnakove's test of distinguishing <i>cis</i> and <i>trans</i> isomers using the concept of trans effect, mechanism of substitution reactions in square planar complexes, factors affecting substitution reactions. Acquaintance of Trans effect in octahedral complexes	12	02	01	15

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

76CH-201.3: Metal-Ligand Bonding: <i>Electronic Spectra and Magnetic Properties of Transition Metal Complexes</i> Calculations of Dq , B (Racah parameter) and β (Nephelauxetic ratio) parameters for Cr(III), Co(II) and Ni(II) complexes using electronic spectral data. Charge transfer spectra: ligand to metal and metal to ligand.	12	02	01	15
76CH-201.4: Circular Dichroism and Optical Rotatory Dispersion: Polarized light, fundamental symmetry requirements, for optical activity, interaction of polarized light with optically active matter, optical rotation, Cotton effect, configuration of Tris -chelated complexes.	12	02	01	15
76CH-201.5: Borane Chemistry and Metal Clusters: Bonding and topology of boranes, 4-digit coding (s, t, y, x) numbers for B_2H_6 , B_4H_{10} , B_5H_9 , B_5H_{11} and B_6H_{10} and their utilities. Acquaintance with carboranes and metallocarboranes. Metal clusters: synthesis, reactivity and bonding.	12	02	01	15
Total Hours	60	10	05	75

Suggestion for End Semester Assessment

Suggested Specification Table (For ESA)

CO	Unit Titles	Marks Distribution			Total Marks
		R	U	A	
CO-1	Electronic Spectra of Transition Metal Complexes	03	01	01	05
CO-2	Reaction Mechanism of Transition Metal Complexes	02	06	02	10
CO-3	Metal-Ligand Bonding	03	07	05	15
CO-4	Circular Dichroism and Optical Rotatory Dispersion		10	05	15
CO-5	Borane Chemistry and Metal Clusters	03	02	-	05
Total		11	26	13	50

Legend: R:Remember,

U:Understand,

A:Apply

The written examination of 50 marks will be held at the end of semester for Inorganic Chemistry

Note. Detailed Assessment rubric need to be prepared by the course wise teachers for above tasks. Teachers can also design different tasks as per requirement, for end semester assessment.

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Suggested Instructional/Implementation Strategies:

- Improved Lecture
- Tutorial
- Case Method
- Group Discussion
- Role Play
- Visit to NCL, CSIR laboratories
- Demonstration
- ICT Based Teaching Learning (Video Demonstration/Tutorials CBT, Blog, Facebook, Twitter, Whatsapp, Mobile, Online sources)
- Brainstorming

Suggested Learning Resources:

(e) Books:

S. No.	Title	Author	Publisher	Edition & Year
1	Concise Inorganic Chemistry	J. D Lee	Wiley India Pvt Ltd.	4 th edition
2	Organometallic & Bioinorganic Chemistry	Ajay Kumar	Paperback	2 nd edition
3	Organometallic chemistry	BD Gupta	Universities Press	First Edition (1 January 2010)
4	Bioinorganic Chemistry	AK Das	Prentice-Hall	Revised edition
5	Inorganic chemistry	Gary L. Miessler	Pearson	5 th edition
6	Inorganic chemistry	VK Jaiswal	Shri Balaji	Revised fifteenth edition-2022

Suggested Web Sources:

CODE: 76CH-202

COURSE NAME: ORGANIC CHEMISTRY II

L	T	P
3	1	0

Pre-requisite: Students should have basic knowledge of aromaticity, reaction intermediates, types of reactions and their mechanisms.

Rationale: This course will provide applicable and creative knowledge about aromatic electrophilic, aliphatic substitution reaction, free radical substitution reactions, elimination reactions, pericyclic reactions as well as reactivity of carbonyl compounds in various reactions

COURSE OUTCOMES:

After the completion of this course, the learner will:

CO1: Explain and apply the concept of aromatic electrophilic and aliphatic substitution reactions.

CO2: Explain the concept of free radical substitution reactions with their mechanisms and create mechanistic path for newer free radical reactions

CO3: Explain the reactivity of carbonyl compounds in various reactions and apply these concepts for synthesizing new organic compounds

CO4: Explain mechanistic details of different types of elimination reactions, Saytzeff and Hoffman rules and apply these concepts in prediction of product formation in various elimination reactions

CO5: Explain pericyclic reactions, types, mechanisms and FMO and PMO approach in reference of pericyclic compounds and propose mechanistic path for newer products obtained by pericyclic reactions.

Organic Chemistry-II

UNIT I

Aliphatic Electrophilic Substitution. Bimolecular mechanisms, S_{E2} and S_{Ei} mechanisms. The S_{E1} mechanism, electrophilic substitution accompanied by double bond shifts. Effect of substrates, leaving group and solvent polarity on the reactivity.

Aromatic Electrophilic Substitution. The arenium ion mechanism, orientation and reactivity. The ortho/para ratio, ipso attack. Vilsmeier reaction, Fries rearrangement

UNIT II

Free Radical Reactions:

Types of free radical reactions and their detection. Free radical substitution mechanism, mechanism at aromatic substrates. Reactivity in the attacking radicals. The effect of solvents on reactivity. Allylic halogenations (NBS) oxidation of aldehydes to carboxylic acids, auto-oxidation, Radical coupling, arylation of aromatic compounds by diazonium salts. Sand Meyer reaction. Free radical rearrangement. Hunsdiecker reaction.

UNIT III

Addition to Carbon-Carbon Multiple Bonds: Mechanistic and stereochemical aspects of addition reactions.

AKSUniversity

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Hydroboration. Michael reaction. Sharpless asymmetric epoxidation.

Addition to Carbon-Hetero atom Multiple Bonds: Mechanism of metal hydride reduction of carbonyl compounds, acids, esters and nitriles. Wittig reaction. Mechanism of condensation reactions involving enolates. Mannich, Benzoin, Perkin, and Stobbe reactions.

UNIT IV

Elimination Reactions

The E₂, E₁ And E₁CB mechanisms, orientation of the double bond. Reactivity- effects of substrate structures, attacking base, the leaving group and the medium. Mechanism and orientation in pyrolytic Elimination

UNIT V

Pericyclic Reactions: Molecular orbitals and their symmetry. Molecular orbitals of ethylene, 1,3-butadiene, 1,3,5-hexatriene and allyl system, their symmetry properties. Characteristics and classification. Electrocyclic reactions: conrotatory and disrotatory motions, 4n, 4n+2 and allyl systems. Woodward-Hoffmann correlation diagrams. FMO and PMO approach. Cycloadditions. Woodward-Hoffmann correlation diagrams. FMO and PMO approach. Antarafacial and suprafacial additions. 4n and 4n+2 systems, 2+2 addition of ketenes. Ene synthesis. Sigmatropic Rearrangements. Suprafacial and antarafacial 1,3- and 1,5- shifts of H, sigmatropic shifts involving carbon moieties, 2,3-, and 3,3-sigmatropic rearrangements. Claisen, Cope, aza-Cope, Sommelet-Hauser, and Fisher Indole rearrangements.

Scheme of Studies:

Category of course	Course Code	Course Title	Scheme of studies (Hours/Week)					Total Credits (C)
			CI	LI	SW	SL	Total Study Hours (CI+LI+SW+SL)	
Program Core (PCC)	76CH202	Organic Chemistry II	4	0	1	1	6	4

Legend:

- CI:** Class room Instruction (Includes different instructional strategies i.e. Lecture (L) and Tutorial (T) and others),
- LI:** Laboratory Instruction (Includes Practical performances in laboratory workshop, field or other locations using different instructional strategies)
- SW:** Sessional Work (includes assignment, seminar, mini project etc.),
- SL:** Self Learning,
- C:** Credits.

Note: SW & SL has to be planned and performed under the continuous guidance and feedback of teacher to ensure outcome of Learning.

AKS University

Scheme of Assessment: Theory

Board of Study	Course Code	Course Title	Scheme of Assessment (Marks)						
			Progressive Assessment (PRA continuous assessment 50)					End Semester Assessment (ESA)	Total Marks (PRA+ESA)
			Class/Home Assignment 5 number 3 mark each (CA)	Class Test 2 (2 best out of 3) 10 marks each (CT)	Seminar one (SA)	Class Attendance (AT)	Total Marks (CA+CT+SA+AT)		
PCC	76CH202	Organic Chemistry II	15	20	10	5	50	50	100

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

76CH202.1: Explain and apply the concept of aromatic electrophilic and aliphatic substitution reactions.

Activity	AppX Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1.1 Explain aliphatic and aromatic electrophilic substitution reactions with their mechanisms and factors affecting them		1. Aliphatic Electrophilic Substitution SE1 mechanism 2. Bimolecular mechanisms, SE2 and SEi mechanisms.	Electron displacement effects in organic molecules

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

SO1.2 Create mechanistic path for newer electrophilic substitution reactions		3. Electrophilic substitution accompanied by double bond shifts.	
SO1.3 Explain and apply orientation and reactivity of substituted aromatic compounds		4. Effect of substrates, leaving group and solvent polarity on the reactivity.	
SO1.4 Explain and apply ortho/para ratio		5. Aromatic Electrophilic Substitution.	
SO1.5 Explain Ipso attack and various types electrophilic substitution reactions.		6. The arenium ion mechanism, 7. Orientation and reactivity. 8. The ortho/para ratio 9. Ipso attack. T1. Vilsmeier reaction, T2. Fries rearrangement T3. Nitration, sulphonation, acylation, alkylation, halogenation	

SW-1 Suggested Sessional Work (SW):

a. Assignments: Discuss mechanistic paths of nitration and sulphonation of phenol and benzoic acid

b. Mini Project:

Draw reaction coordinate diagram of sulphonation, nitration, alkylation, acylation, halogenations of benzene

c. Other Activities (Specify):

Explain activators and deactivators groups with the help of electron displacement groups

76CH202.2: Explain the concept of free radical substitution reactions with their mechanisms and create mechanistic path for newer free radical reactions

Activity	AppX Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO2.1 Explain types of free radical reaction and detect their generation		1. Types of free radical reactions and their detection. 2. Free radical substitution mechanism	Generation of free radical, their structure and stability

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

<p>SO2.2 Create/ propose mechanistic path for newer free radical substitution reactions</p> <p>SO2.3 Explain and apply reactivity of attacking radicals</p> <p>SO2.4 Explain allylic halogenations, auto-oxidation</p> <p>SO2.5 Apply radical coupling and explain arylation of aromatic compound by diazonium salts.</p>		<p>3. Mechanism at aromatic substrates.</p> <p>4. Reactivity in the attacking radicals.</p> <p>5. The effect of solvents on reactivity.</p> <p>6. Allylic halogenations (NBS) oxidation of aldehydes to carboxylic acids,</p> <p>7. Auto-oxidation</p> <p>8. Radical coupling,</p> <p>9. Arylation of aromatic compounds by diazonium salts.</p> <p>T1. Sand Meyer reaction</p> <p>T2. Free radical rearrangement</p> <p>T3. Hunsdiecker reaction.</p>	
---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--

SW-1 Suggested Sessional Work (SW):

a. Assignments: Discuss various methods for detection of free radicals.

b. Mini Project:

Applications of Allylic halogenations (NBS) oxidation of aldehydes to carboxylic acids

c. Other Activities (Specify): Explain importance of Sand Meyer reaction, Free radical rearrangement, Hunsdiecker reaction

76CH202.3: Explain the reactivity of carbonyl compounds in various reactions and apply these concepts for synthesizing new organic compounds

Activity	AppX Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO3.1 Explain Mechanistic and stereochemical aspects of addition reactions		1. Mechanistic and stereochemical aspects of addition reactions.	General introduction to Addition reaction

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

<p>SO3.2 Create/ propose mechanistic path for newer addition reaction</p> <p>SO3.3 Explain and apply hydroboration, epoxidation</p> <p>SO3.4 Explain Mechanism of metal hydride reduction of carbonyl compounds,</p> <p>SO3.5 Explain and apply Reduction of acids, esters and nitriles.</p>		<p>2. Hydroboration</p> <p>3. Michael reaction.</p> <p>4. Sharpless asymmetric, epoxidation.</p> <p>Addition to Carbon-Hetero atom Multiple Bonds.</p> <p>5. ----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--

SW-1 Suggested Sessional Work (SW):

a. Assignments: What are enolates and Discuss reactions involving enolates

b. Mini Project:

Importance of Mannich, benzoin and perkin reaction

c. Other Activities (Specify): Diagram of Significance of Hydroboration

76CH202.4: Explain mechanistic details of different types of elimination reactions, Saytzeff and Hoffman rules and apply these concepts in prediction of product formation in various elimination reactions

Activity	AppX Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO4.1 Explain Mechanistic and stereochemical aspects of elimination reaction reactions		1. The E2 reaction 2. E1 And E1CB mechanisms, 3. Orientation of the double bond	General introduction to Elimination reaction

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

SO4.2 Create/ propose mechanistic path for newer elimination reactions		Reactivity-	
SO4.3 Explain Pyrolytic elimination and double bond reactivity		4. Effects of substrate structures	
SO4.4 Explain Evidences in support of elimination reaction		5. Effects of attacking base,	
SO4.5 Explain Factors affecting elimination reaction		6. Effects of the leaving group	
		7. Effects of the medium.	
		8. Pyrolytic elimination	
		9. Mechanism and orientation in pyrolytic Elimination	
		T1 Double bond reactivity	
		T2 Evidences in supports of E1, E2	
		T3 Evidences in supports of E1CB	
		Mechanism	

SW-1 Suggested Sessional Work (SW):

a. Assignments: alpha and beta elimination, Saytzeff rule

b. Mini Project:

Saytzeff rule

c. Other Activities (Specify): Pictorial presentation of Pyrolytic elimination

76CH202.5: Explain pericyclic reactions, types, mechanisms and FMO and PMO approach in reference of pericyclic compounds and proposed mechanistic path for newer products obtained by pericyclic reactions.

Activity	AppX Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO5.1 Explain Mechanistic and stereochemical aspects of pericyclic reaction		1. Molecular orbitals and their symmetry. 2. Molecular orbitals of ethylene,	FMO and PMO theories

AKS University

Faculty of Basic Science, Department of Chemistry

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

76CH202.1: Explain and apply the concept of aromatic electrophilic and aliphatic substitution reactions.	12	02	01	15
76CH202.2: Explain the concept of free radical substitution reactions with their mechanisms and create mechanistic path for newer free radical reactions	12	02	01	15
76CH202.3: Explain the reactivity of carbonyl compounds in various reactions and apply these concepts for synthesizing new organic compounds	12	02	01	15
76CH202.4: Explain mechanistic details of different types of elimination reactions, Saytzeff and Hoffman rules and apply these concepts in prediction of product formation in various elimination reactions	12	02	01	15
76CH202.5: Explain pericyclic reactions, types, mechanisms and FMO and PMO approach in reference of pericyclic compounds and proposed mechanistic path for newer products obtained by pericyclic reactions.	12	02	01	14
Total Hours	60	10	05	75

Suggestion for End Semester Assessment

Suggested Specification Table (For ESA)

The end of semester assessment for Organic Chemistry I will be held with written examination of 50 marks

Note. Detailed Assessment rubric need to be prepared by the course wise teachers for above tasks. Teachers can also design different tasks as per requirement, for end semester assessment.

Suggested Instructional /Implementation Strategies:

28. Improved Lecture
29. Tutorial
30. Case Method
31. Group Discussion
32. Role Play
33. Visit to NCL, CSIR laboratories
34. Demonstration
35. ICT Based Teaching Learning (Video Demonstration/Tutorials CBT, Blog, Facebook, Twitter, Whatsapp, Mobile, Online sources)
36. Brainstorming

Suggested Learning Resources:

(f) **Books:**

S. No.	Title	Author	Publisher	Edition & Year
1	Advanced Organic Chemistry Reactions, Mechanism and Structure	Jerry March	John Wiley.	Revised edition 2020
2	Advanced Organic Chemistry	F.A. Carey and R.J. Sundberg	Plenum	New edition, 2021
3	A Guide Book to Mechanism in Organic Chemistry	Peter Sykes	Longman	1985
4	Organic Chemistry	R.T. Morrison and R.N. Boyd	Prentice-Hall	Revised edition
5	Advanced organic chemistry	Dr. Jagdamba Singh, Dr. LDS Yadav	Pragati prakashan	Revised edition 2016
6	Organic Chemistry	J. Clayden	Oxford Press	Revised edition

CODE: 76CH203

COURSE NAME: PHYSICAL CHEMISTRY II, NO. OF CREDITS: 4

L T P

3 1 0

Pre-requisite: Students should have basic knowledge of electro chemistry, chemical dynamics, statistical thermodynamics, angular momentum and macromolecules.

Rationale: Upon completion of the course student shall be able to learn about system property analyzed using electro chemistry

After the completion of this course, the learner will –

76CH203.1: Explain the chemical kinetics of reactions through different approaches.

76CH203.2: Describe and apply the knowledge with help of statistical thermodynamics.

76CH203.3: Aware about different types of polymeric materials, their synthesis and properties

76CH203.4: Understand approximate methods and angular momentum and its importance.

76CH203.5: Understand to handle different electrochemical processes

UNIT I

Chemical Dynamics Methods of determining rate laws, collision theory of reaction rates, steric factor, activated complex theory, Arrhenius equation and the activated complex theory; ionic reactions, kinetic salt effects, steady state kinetics, kinetic and thermodynamic control of reactions, treatment of unimolecular reactions. Dynamics of unimolecular reactions; Lindemann-Hinshelwood and Rice-Ramsperger-Kassel-Marcus and Slater theories of unimolecular reactions.

UNIT II

Statistical Thermodynamics:

Aims of statistical thermodynamics – thermodynamic probability, Ensemble averaging, postulates of ensemble averaging. Microcanonical, canonical and grand canonical ensembles, corresponding distribution laws (using Lagrange's method of undetermined multipliers). Distinguishable and Indistinguishable/ Identical Particles. Maxwell-Boltzmann statistics, Boltzmann distribution, derivation of the Boltzmann distribution expression, determination of the Boltzmann constant, Maxwell distribution law of velocities from Boltzmann distribution expression. Quantum statistics: Bose-Einstein statistics and Fermi-Dirac statistics, Bose-Einstein condensation & distribution function. Derivation of Fermi-Dirac distribution function and its comparison.

UNIT III

Macromolecules. Polymers, types of polymers, kinetics of polymerization, mechanism of polymerization reactions. Molecular mass of macromolecules, number and mass average molecular mass; molecular mass determination (osmometry, viscometry, diffusion and light scattering methods), sedimentation, chain structures and their configuration.

UNIT IV

Approximate Methods

The variation theorem, linear variation principle. Perturbation theory (first order and non-degenerate). Applications of variation method and perturbation theory to the Helium atom

Angular Momentum. Ordinary angular momentum, generalized angular momentum, eigen functions for angular momentum, eigen values of angular momentum, addition of angular momenta, spin, antisymmetry and Pauli exclusion principle.

UNIT V

Electrochemistry:

Ion size factor and ion-solvent interactions. Decomposition voltage and overvoltage. Consecutive electrode processes.

AKSU University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Exchange current density. Electrokinetic potential, its determination and significance. Butler-Volmer's equation. Tafel's plot. Theory of polarography. Ilkovic equation. Half wave potential and its significance. Introduction to corrosion. Forms of corrosion. Corrosion monitoring and prevention. Application of corrosion.

Scheme of Studies:

Board of Study	Course Code	Course Title	Scheme of studies (Hours/Week)					Total Credits (C)
			CI	LI	SW	SL	Total Study Hours (CI+LI+SW+SL)	
Program Core (PCC)	76CH203	Physical Chemistry-II	4	0	1	1	6	4

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

76CH203.1: 76CH203.1: Explain the chemical kinetics of reactions through different approaches.

Activity	Apex Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1.1 Describe methods of determining rate laws SO1.2 Describe mathematical collision theory with applications SO1.3 Explain Arrhenius equation. SO1.4 Discuss activated complex theory SO1.5 Explain and apply		UNIT I Chemical Dynamics 1.1 Methods of determining rate laws, 1.2 Factors affecting rate of reactions 1.3 Collision theory of reaction rates	Applications of chemical kinetics

AKSU University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

unimolecular and bimolecular reactions		1.4 Steric factor 1.5 activated complex theory, 1.6 Arrhenius equation 1.7 Transition state theory 1.8 ionic reactions, 1.9 kinetic salt effects, 1.11 steady state kinetics, 1.12 kinetic and thermodynamic control of reactions, T1-treatment of unimolecular reactions. T2 Dynamics of unimolecular reactions; T3 Uses of chemical kinetics 1.11-Lindemann-Hinshelwood and 1.12-Rice-Ramsperger-Kassel-Marcus and Slater theories of unimolecular reactions.	

SW-1 Suggested Sessional Work (SW):

a. Assignments:

AKSU University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Discuss the Unimolecular reaction & bimolecular reaction

76CH204.2: Describe and apply the knowledge with helps of statistical thermodynamics

Activity	Apex Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
<p>SO2.1 Restate Aims of statistical thermodynamics</p> <p>SO2.2 Describe Ensemble averaging, postulates of ensemble averaging and thermodynamic probability.</p> <p>SO2.3 Explain and apply Maxwell-Boltzmann statistics</p> <p>SO2.4 Explain and apply Bose and Fermi statistics.</p> <p>SO2.5 7 Determination of the Boltzmann constant,</p>		<p>Statistical Thermodynamics:</p> <p>2.1 Aims of statistical thermodynamics –</p> <p>2.2 Thermodynamic probability,</p> <p>2.3 Ensemble averaging, postulates of ensemble averaging.</p> <p>2.4 Microcanonical, canonical and grand canonical ensembles, corresponding distribution laws (using Lagrange's method of undetermined multipliers). Distinguishable and Indistinguishable/ Identical Particles.</p> <p>2.5 Maxwell-Boltzmann statistics, 2.6 Boltzmann distribution, derivation of the Boltzmann distribution expression, 2.7 determination of the Boltzmann constant,</p> <p>2.8 Maxwell distribution law of velocities from Boltzmann distribution expression. 2.9 Quantum statistics: Bose-Einstein statistics and Fermi-Dirac statistics, Bose-Einstein condensation & distribution function. Derivation of Fermi-Dirac distribution function and its comparison.</p>	<p>Explain fundamentals of statistical thermodynamics</p>

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

SW-2 Suggested Sessional Work (SW):

A. Assignments:

Discussion of Morse potential energy diagrams, vibration-rotation spectroscopy, P, Q, R branch's.

b. Mini Project:

Problem-solving exercises involving TH

c. Other Activities (Specify):

Write an essay on Resonance Raman Spectroscopy, coherent anti-stokes Raman Spectroscopy (CARS)

76CH204.3 Aware about different types of polymeric materials, their synthesis and properties

Activity	Apex Hrs
CI	12

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
<p>SO3.1 Explain introduction and types of polymers</p> <p>SO3.2 Discuss kinetics of polymerization, mechanism of polymerization reactions.</p> <p>SO3.3 Explain and apply Molecular mass of macromolecules,</p> <p>SO3.4 Determine molecular weight of polymers by different theory method</p> <p>SO3.5 Explain chain structures and their configuration.</p>		<p>3.1 <i>Introductions of</i> Polymers,</p> <p>3.2 types of polymers,</p> <p>3.3 kinetics of polymerization, mechanism of polymerization reactions.</p> <p>3.4 Molecular mass of macromolecules,</p> <p>3.5 number and mass average molecular mass; molecular mass</p> <p>3.6 osmometry method ,</p> <p>3.7 viscometry method,</p> <p>3.8 diffusion method</p> <p>3.9 light scattering methods),</p> <p>3.10 Sedimentation velocity method</p> <p>3.11 chain structures and their configuration.</p> <p>3.12 Examples of polymers</p> <p>T1 Condensation polymers</p> <p>T2 Addition Polymers</p> <p>T3 Molecular weight of Polymer</p>	<p>Explain Polymers with examples</p>

SW-3 Suggested Sessional Work (SW):

AKSU University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

a. Assignments:

Classification of polymer

b. Mini Project:

Molecular weight of polymer

c. Other Activities (Specify):

Condensation polymers

76CH203.4: Understand approximate methods and angular momentum and its importance.

Activity	Apex Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
<p>SO4.1 Explain and apply variation theorem,</p> <p>SO4.2 Describe Perturbation theory (first order and non-degenerate).</p> <p>SO4.3 Discuss zero fields splitting and Kramer's degeneracy.</p> <p>SO4.4 Explain and apply Angular Momentum</p> <p>SO4.5 Discuss eigen values and Eigen Functions of angular momentum,</p>		<p>4.1 Approximate Methods</p> <p>4.2 The variation theorem,</p> <p>4.3 linear variation principle.</p> <p>4.4 Perturbation theory (first order and non-degenerate).</p> <p>4.5 Applications of variation method</p> <p>4.6 perturbation theory to the Helium atom</p> <p>4.7 Angular Momentum.</p> <p>4.8 Ordinary angular momentum,</p> <p>4.9 generalized angular momentum,</p> <p>4.10 eigen functions for angular momentum,</p> <p>4.11 eigen values of angular momentum,</p> <p>4.12 addition of angular momenta,</p> <p>T2 antisymmetry</p> <p>T3 Pauli exclusion principle.</p>	Applications of Angular momentum

SW-4 Suggested Sessional Work (SW):

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

a. Assignments:

Applications of Angular Momentum

b. Mini Project:

Apply and uses of variation theorem

76CH203.5: Understand to handle different electrochemical process

Activity	Apex Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning
<p>SO5.1 Explain ion solvent interactions.</p> <p>SO5.2 Describe overvoltage with applications</p> <p>SO5.3 Explain Electrokinetic potential, its determination and significance</p> <p>SO5.4 Explain and apply Butler-Volmer's equation and Tafel's plot.</p> <p>SO5.5 Explain and apply polarography with application</p>		<p>Unit-V Electrochemistry:</p> <p>5.1 Ion size factor</p> <p>5.2 Ion-solvent interactions. 5.3 Decomposition voltage</p> <p>5.3 overvoltage.</p> <p>5,4 Consecutive electrode processes.</p> <p>5.5 Exchange current density.</p> <p>5.6 Electrokinetic potential, its determination and significance.</p> <p>5.7 Butler-Volmer's equation.</p> <p>5.8 Tafel's plot.</p> <p>5.9 Theory of polarography. 5.10 Ilkovic equation.</p> <p>5.11 Application of Polarography</p> <p>5.12 Half wave potential and its significance.</p> <p>T1 Introduction to corrosion. Forms of corrosion.</p> <p>T2 Corrosion monitoring and prevention.</p> <p>T3 Application of corrosion.</p>	Application of electro chemistry

SW-5 Suggested Sessional Work (SW):

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

a. Assignments:

Identification of compounds by polarography theory

b. Mini Project:

Measurement technique, elucidation of polarographic method

Brief of Hours suggested for the Course Outcome

3	1	0

Pre-requisite: Students should have basic knowledge of symmetry, symmetry elements, and symmetry operation. They may also know about EMR, mode of vibration, M-L bond, coordination number, diffraction, Scattering and reflection.

Rationale: Upon completion of the course student shall be able to learn about system property analyzed using group theory. They reveal information on the hyperfine interactions and ESR, *acquainted with paramagnetic species*. Understand elucidation of the crystal structure by using x-ray.

Course Outcomes:

After the completion of this course, the learner will –

76CH204.1: Explain the symmetry and group theory provides a powerful framework to understand and analyze patterns, structures, and behaviors across various disciplines.

76CH204.2: Describe and apply the knowledge which helps in identifying and characterizing specific vibrational frequencies..

76CH204.3: Collectively aim to provide students with a comprehensive discussion of the theory, operation, data analysis, and applications of Raman spectroscopy.

76CH104.4: Students would gain a comprehensive apply the theoretical foundations, practical aspects, and diverse applications of ESR spectroscopy.

76CH204.5: Collectively aim to equip students with a comprehensive explanation of the theoretical principles, practical methodologies, and diverse applications of diffraction techniques.

UNIT-I

Symmetry and Group Theory: Schonflies symbols, representations of groups by matrices (representation for the C_n , C_{nv} , C_{nh} , etc groups to be worked out explicitly). Character of a representation. The great orthogonality theorem (without proof) and its importance. Character tables and their use in spectroscopy.

UNIT-II Vibrational Spectroscopy

A- Infrared Spectroscopy: Review of linear harmonic oscillator, vibration energies of diatomic molecules, Zero point energy, force constants and bond strengths, anharmonicity, Morse potential energy diagrams, vibration-rotation spectroscopy, P,Q,R branch's, breakdown of Oppenheimer approximation, vibration of poly atomic molecules, selection rules, normal modes of vibrations, group frequencies, overtones, hot bands, factors affecting band positions and intensities, far IR region, metal ligand vibrations,

UNIT-III

Raman Spectroscopy:

Classical and quantum theories of Raman effect. Pure vibrational- rotational Raman Spectra, mutual exclusion principle, Resonance Raman Spectroscopy, coherent anti-stokes Raman Spectroscopy (CARS).

UNIT-IV Magnetic Resonance Spectroscopy

a. Electron spin Resonance Spectroscopy

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Basic principles, zero field splitting and Kramer's degeneracy, factors affecting the 'g' value. Isotropic and anisotropic hyperfine coupling constants, spin Hamiltonian, spin densities and McConnell relationship, measurement techniques, applications.

b. Nuclear Quadrupole Resonance Spectroscopy

Quadrupole nuclei, quadrupole moments, electric field gradient, coupling constant splitting. Applications.

UNIT-V

X-ray Diffraction

a. Bragg condition, Miller indices, Laue method, Bragg method, Debye-Scherrer method of X-ray structural analysis of crystals, index reflections, identification of unit cells from systematic absences in diffraction pattern..

b. Electron Diffraction

Scattering intensity vs. scattering angle, Wierl equation, measurement technique, elucidation of structure of simple gas phase molecules. Low energy electron diffraction and structure of surfaces.

c. Neutron Diffraction

Scattering of neutrons by solids and liquids, magnetic scattering, measurement techniques. Elucidation of structure of Magnetically ordered unit cell.

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1.1 Restate group operations, including, identity element, inverses, and their significance in defining groups. SO1.2 Describe mathematical representations of groups by matrices. SO1.3 Explain and apply the applications of group actions in permutation groups and geometry. SO1.4 Discuss the representation of character table for different point group. SO1.5 Explain and apply representation theory, character theory, and the relationship between groups and linear transformations		Unit-1 Symmetry and Group Theory 1.1 symmetry and symmetry elements 1.2 Schonflies symbols of symmetry elements, 1.3 Point group of molecules. 1.4 Identification of point group. 1.5 Representations of groups by matrices 1.6 Matrices representation for the C_n , C_{nv} , C_{nh} , etc group's symmetry operation. 1.7 Irreversible reducible (IR) representation of point group 1.8 Formation of character table for C_n , C_{nv} , C_{nh} , etc group's. 1.9 Reversible reducible (RR) representation of point group by character table. T1-Explanation the great orthogonality theorem (without proof) and T2- its importance. T3- Character tables and their use in spectroscopy.	Worked out C_n , C_{nv} , C_{nh} , etc groups.

SW-1 Suggested Sessional Work (SW):

a. Assignments:

Discuss the Character table representation for C_{2v} and C_{3v} point group.

b. Mini Project:

The great orthogonality theorem (without proof) and its importance.

AKS University

Faculty of Basic Science, Department of Chemistry

CODE: 76CH-205

COURSE NAME: COMPUTER APPLICATION IN CHEMISTRY

CREDIT 3

L	T	P
3	0	0

Pre-requisite: Student should have basic knowledge of computer

Rationale: Student will be able to operate various types of softwares and programmes required for a chemist

Course Outcomes:

CO.1: Apply the basics of computers for Chemists.

CO.2: Explain and apply various theoretical and practical principles involved in the design and use of programming interface.

CO.3: apply the basic programming for chemist's requirement like Van der Waals equation.

CO.4: Design and implement Chart plotting using Excel and create the document using MS Word.

CO.5: Apply the Internet, SEO, PDF, JPG and RTF format.

UNIT I

Introduction to Computers and Computing. Basic structure and functioning of computer with a PC as illustrative example. Memory I/O devices. Secondary storage Computer languages. Operating systems with DOS as an example Introduction to UNIX and WINDOWS. Principles of programming Algorithms and flow-charts.

UNIT II

Computer Programming in FORTRAN/C/BASIC. (the language features are listed here with reference to FORTRAN. The instructor may choose another language such as BASIC or C the features may be replaced appropriately). Elements of the compute language. Constants and variables. Operations and symbols Expressions. Arithmetic assignment statement. Input and output Format statement. Termination statements. Branching statements as IF or GOTO statement. LOGICAL variables. Double precision variables. Subscripted variables and DIMENSION. DO statement FUNCTION AND SUBROUTINE.COMMON and DATA statement (Student learn the programming logic and these language feature by hands on experience on a personal computer from the beginning of this topic.)

UNIT III

Programming in Chemistry. Developing of small computer codes using any one of the languages FORTRAN/C/BASIC involving simple formulae in Chemistry, such as Van der Waals equation. Chemical kinetics (determination of Rate constant) Radioactive decay (Half Life and Average Life). Determination Normality, Molarity and Molality of solutions. Evaluation Electronegativity of atom and Lattice Energy from experimental determination of molecular weight and percentage of element organic compounds using data from experimental metal representation of molecules in terms of elementary structural features such as bond lengths, bond angles.

AKS University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

UNIT IV

Use of Computer programmes. Operation of PC. Data Processing. Running of standard Programs and Packages such as MS WORD, MS EXCEL -special emphasis on calculations and chart formations. X-Y plot. Simpson's Numerical Integration method. Programmes with data preferably from physical chemistry laboratory.

UNIT V

Internet. Application of Internet for Chemistry with search engines, various types of files like PDF, JPG, RTF and Bitmap. Scanning, OMR, Web camera.

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Code: 76CH251

Course Name: Inorganic Chemistry Lab-II

No. Of Credits: 2

L	T	P
0	0	2

Pre-requisite: Students should have basic knowledge of Laboratory safety as well as inorganic mixture analysis.

Rationale: This course provides skill in synthesis of inorganic compounds and inorganic mixture analysis.

Course Outcomes

After the completion of this course, the learner will:

CO1: Analyze inorganic mixture qualitatively

CO2: Analyze inorganic mixture containing less common salts

CO3: Separation of inorganic mixture using chromatography

CO4: Synthesize simple inorganic complex compounds.

CO5. Estimate metallic ions in solution volumetrically

Unit I: Qualitative Analysis I:

Inorganic mixture analysis (without insoluble and less common salts)

Unit II: Qualitative Analysis II

Inorganic mixture analysis with less common salts

Unit III: Qualitative Analysis III

Separation of inorganic mixture of Ni(II), Co(II) and Zn(II) using chromatography

Separation of inorganic mixture of Ni(II), Co(II), Cu(II) and Zn(II) using chromatography

Unit IV: Inorganic Complex Synthesis I

Synthesis of bis(dimethylglyoximate) nickel (II) : $[\text{Ni}(\text{C}_4\text{H}_7\text{O}_2\text{N}_2)_2]$

Synthesis of hexamine cobalt (III) chloride: $[\text{Co}(\text{NH}_3)_6]\text{Cl}_3$

Synthesis of potassium trioxalato chromate (III) trihydrate: $\text{K}_3[\text{Cr}(\text{C}_2\text{O}_4)_3] \cdot 3\text{H}_2\text{O}$

Unit V: Quantitative Analysis

Separation and estimation of two metal ions like Barium and copper (Ba-Cu)

Scheme of Studies:

Board of Study	Course Code	Course Title	Scheme of studies (Hours/Week)				Total Study Hours CI+LI (2hr) + SW + SL)	Total Credits (C)
			CI	LI	SW	SL		
Program Core (PCC)	76CH-251	Inorganic Chemistry II	0	2	1	1	6	2

PCC	76CH-251	Inorganic Chemistry II	35	10	5	50	35(Exercise)+10(viva)+5(for record file)	100	

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including, Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

76CH151.1: Analyze inorganic mixture qualitatively

Activity	AppX Hrs
LI	2
SW	1
SL	1
Total	4

AKS University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1 Analyse five radicals mixture of inorganic compounds	Unit 1.1 Identify the given radicals of inorganic compounds qualitatively.		Safety measurement of chemicals
SO2 Analyse five radicals mixture of inorganic compounds	Identify the given radical mixture of inorganic compounds.		

SW-1 Suggested Sessional Work (SW):

a. Assignments:

Separation of binary mixture of inorganic compounds by paper chromatography

d. Mini Project:

Preparation of inorganic complexes

c. Other Activities (Specify):

76CH151.2: Inorganic mixture analysis with less common salt

Activity	AppX Hrs
LI	2
SW	1
SL	1
Total	4

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1 Analyse seven radicals mixture of inorganic compounds with less common salts	Unit 2.1. Identify the given inorganic compounds containing at least seven radicals.		Basics to identify acid and basic radicals
SO2 Analyse seven radicals mixture of inorganic compounds with less common salts	2.2. Identify the given inorganic compounds containing at least three radicals.		

SW-2 Suggested Sessional Work (SW):

a. Assignments:

Identify radicals containing common salts

b. Mini Project:

AKS University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

c. Other Activities (Specify):

76CH151.3: Separation of inorganic mixture using chromatography

Activity	AppX Hrs
LI	2 (2hr. each)
SW	1
SL	1
Total	4

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1 Identify tertiary mixture of inorganic compounds using chromatography SO2 Identify quaternary mixture of inorganic compounds using chromatography	Unit 3.1 Identify binary mixture of inorganic compounds (Ni^{2+} , Co^{2+} and Zn^{2+}) using TLC 3.2. Identify tertiary mixture of inorganic compounds (compounds (Ni^{2+} , Co^{2+} , Zn^{2+} and Cu^{2+}) using TLC		Basics of chromatography

SW-3 Suggested Sessional Work (SW):

4. **Assignments:** Discuss principle of chromatography
5. **Mini Project:** Development of chromatogram
6. **Other Activities (Specify):** NMR Study of purified compound

76CH151.4: Synthesize simple inorganic complex compounds

Activity	AppX Hrs
LI	2 (2hr each)
SW	1
SL	1
Total	4

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction	Self Learning (SL)

AKS University

Faculty of Basic Science, Department of Chemistry

Course Name: Organic Chemistry Lab-II

Code: 76 CH-252 No. Of Credits: 2

L T P
0 0 2

Pre-requisite: Students should have basic knowledge of Laboratory safety as well as qualitative and quantitative analysis.

Rationale: This course provides skill in synthesis of organic compounds and qualitative and quantitative organic analysis.

Course Outcomes: After the completion of this course, the learner will:

76CH152.1: Analyse a given mixture of bi functional organic compounds qualitatively in laboratory.

76CH152.2: Estimate carbohydrate, Vitamin C, Aspirin by spectrophotometer

76CH152.3: Synthesize various organic compounds via green methods

76CH152.4: Synthesize organic compounds via two steps.

76CH152.5: Analyse Quantitatively: Iodine value of oil fat, BOD, COD, DO of water sample

Unit 1 Qualitative Organic analysis

Qualitative analysis of bi functional compounds

Unit 2 Quantitative analysis of organic compound

Estimation of carbohydrate, Vitamin C, Aspirin by spectrophotometer

Unit 3 Synthesis I

Synthesis of organic compounds involving some of the following reactions: Solvent free aldol condensation, Azomethine

Unit 4 Synthesis II

Two step synthesis: Thio carbonylhydrazide conventional and Microwave synthesis

Unit 5 Quantitative analysis

Analysis of oil and fat : Iodine value, R.M value of oil fat

Water analysis: Ph, conductivity, TDS, BOD, COD, DO of water sample

AKS University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1 Analyse binary mixture of organic compounds SO2 Analyse binary mixture of organic compounds by utilizing different solvents	Unit 1.1 Separate and identify the given binary mixture of organic compounds (with BI functional group or Hydrocarbons) (separation by water) 1.2 Separate and identify the given binary mixture of organic compounds (with BI functional group or Hydrocarbons) (separation by utilizing different solvents)		Purification of organic compounds by crystallization Preparation of Required reagent for qualitative organic analysis

SW-1 Suggested Sessional Work (SW):

a. Assignments:

Preparation of Derivative and purification

b. Mini Project:

Poster of Separation Techniques for organic compounds

c. Other Activities (Specify):

Characterization of compounds by I.R., NMR, MASS spectroscopy

76CH252.2: Estimate carbohydrate, Vitamin C, Aspirin by spectrophotometer

Activity	AppX Hrs
LI	2
SW	1
SL	1
Total	4

AKS University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1 Estimate of Vitamin C by spectrophotometer SO2 Estimate of Aspirin by spectrophotometer	Unit 2.1. Estimation of Vitamin C by spectrophotometer 2. Estimation of Aspirin by spectrophotometer		Purification of organic compounds (with bi functional group) by crystallization Preparation of Required reagent for qualitative organic analysis

SW-2 Suggested Sessional Work (SW):

a. Assignments:

Limitations of Beer-Lambert law

b. Mini Project:

Difference between colourimetry and spectrophotometry

c. Other Activities (Specify):

Working of double beam Spectrophotometer

76CH252.3: Synthesis of various organic compounds via green methods

Activity	AppX Hrs
LI	2 (2hr.each)
SW	1
SL	1
Total	4

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1 Apply green aldol condensation SO2 Synthesis of Azomethine via greener route	Unit 3.1 Solvent free aldol condensation 3.2 Synthesis of Azomethine		Solvent free synthesis

AKS University
Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

SW-3 Suggested Sessional Work (SW):

a. Assignments:

Green and conventional method of synthesis

b. Mini Project:

Principle of Green Chemistry

c. Other Activities (Specify):

76CH252.4: Synthesize organic compounds via two steps.

Activity	AppX Hrs
LI	2 (2hr each)
SW	1
SL	1
Total	4

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1 Synthesize organic compounds by conventional method SO2 Synthesize organic compounds by Green route	Unit 4. 1 Synthesis Thiocarbohydrazide by conventional route 4. 2 Synthesis Thiocarbohydrazide by green route		Green methods of synthesis

SW-4 Suggested Sessional Work (SW):

a. Assignments:

Principle of microwave heating

B. Mini Project:

Conventional synthetic methods and limitations

c. Other Activities (Specify):

Tables of compounds synthesized by microwave and % Yield

76CH 252.5: Analyse Quantitatively: Iodine value of oil fat, BOD, COD, DO of water sample

AKS University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Activity	AppX Hrs
LI	2 (2hr each)
SW	1
SL	1
Total	6

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1 Analyse value of given oil and fat SO2 DO of water sample	Unit 5. 1 Iodine value of oil fat 5.2 DO of water sample		Water analysis parameters

SW-4 Suggested Sessional Work (SW):

a. Assignments:

R.M Value and its importance

B. Mini Project:

C.O.D., B.O.D.

C. Other Activities (Specify):

Physical parameters of Water analysis

M.Sc. Chemistry Semester II
Code: 76CH-253
Subject Name: Physical Chemistry Lab-II

L	T	P
0	0	2

Pre-requisite: Students should have basic knowledge of Laboratory safety as well as refractive index, refractivity, and molar refractivity properties of liquids in analysis.

Rationale: This course provides skill in knowledge of Laboratory safety as well as refractive index, refractivity, and molar refractivity properties of liquids in analysis.

Course Outcomes: After the completion of this course, the learner will:

- 76CH253.1: Determine refractive index, refractivity, and molar refractivity properties of liquids in analysis.
- 76CH253.2: Determine rate and estimate molecular mass of polymer system.
- 76CH253.3: Solve wet-lab practical difficulties related to kinetics of in version,
- 76CH253.4: Analyze distribution properties of two liquids.
- 76CH253.5: Handle electrode potential for various applications.

Unit-1 Colorimetry

- 1- Determination of Composition of a Complex by Jobs method
- 2- Colorimetric determination of Iron in potable water.

Unit-2 Refractometry

- 3- Determine the refractive index of simple organic liquids (environment friendly).
- 4- Study the variation of refractive index with concentration for KCl solution and thereafter determine the unknown concentration of given KCl solution.

Unit -3- Polarimetry

- 5- Study the variation of angle of optical rotation with the concentration of any optically active substance (sucrose or glucose) and determine the unknown concentration of given solution.
- 6- Determine the specific and molecular rotation of sucrose or glucose at number of concentrations.

Unit-4- Potentiometry

- 7- Determine the standard electrode potential of Cu and Zn.
- 8- Study the precipitation titration between KCl and AgNO_3 potentiometrically.

Unit-5- Distribution Law

- 9- Determine distribution coefficient of ammonia between chloroform and water.
- 10- Determine the formula of the complex formed between copper(II) ion and ammonia using distribution method.

M.Sc. Chemistry Semester III

CODE: 76CH-301

Course Name: Application Of Spectroscopy

L	T	P
3	1	0

Pre-requisite: Students should have basic knowledge of principles of uv-visible, IR, NMR spectroscopy.

Rationale: Upon completion of the course student shall be able to analyzing the pattern, intensity, and position of peaks of samples like medicine for elucidating molecular structures, determining purity, studying molecular dynamics, and investigating metabolic processes.

Course Outcomes:

After the completion of this course, the learner will –

76CH-301: CO1 Apply the basic principle of UV- Visible Spectroscopy for qualitative analysis

76CH-301: CO2 Explain and apply the basic principle of I.R. Spectroscopy for the qualitative analysis specially for structure elucidation

76CH-301 CO3 Explain and apply the basic principles of NMR spectroscopy (^1H NMR, ^{13}C NMR) for the structure determination of organic compounds.

76CH-301: CO4 Explain the basic principle of Mossbauer spectroscopy for Qualitative analysis

76CH-301 CO5 Apply spectral data obtained from UV-Visible, I.R., NMR, Mossbauer spectroscopy and Mass spectrometry for solving /determining the structure of organic compounds (composite problems)

Unit – 1 Ultraviolet and Visible spectroscopy

Principal and selection rule, types of transition, Effect of solvent polarity on electronic transitions, ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, conjugated polyenes, Fieser Woodward rules for conjugated dienes and carbonyl compounds, ultraviolet spectra of aromatic compounds. Steric effect in biphenyls.

Unit – 2 Vibrational Spectroscopy

Instrumentation, and sampling technique, principle, selection rule, factors affecting vibrational frequencies. Characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ethers, phenols and amines. Detailed study of vibrational frequencies of carbonyl compounds (ketones, aldehydes, esters, amides, acids, anhydrides, lactones, lactams and conjugated carbonyl compounds). Effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones, combination bands and fermi resonance.

Unit – 3 Nuclear Magnetic Resonance Spectroscopy

General introduction principle and definition, chemical shift, spin-spin interaction, shielding mechanism, chemical shift values and correlation for protons bonded to carbon (aliphatic, olefinic, aldehydic and aromatic) and other nuclei (alcohols, phenols, enols, carboxylic acids, amines, amides & mercapto), chemical exchange, effect of deuteration, Stereochemistry, hindered rotation, Karplus curve-variation of coupling constant with disordered angle. NMR shift reagents, solvent effects. nuclear overhauser effect (NOE). ^{13}C NMR Spectroscopy General considerations, chemical shift (aliphatic olefinic, alkyne, aromatic, heteroaromatic and carbonyl carbon), coupling constants..

Unit – 4 Mössbauer Spectroscopy

Basic principles, instrumentation. Application of the technique to the studies of bonding and structures of Fe^{2+} and Fe^{3+} compounds including those of intermediate spin, nature of M-L bond, coordination number, structure and detection of oxidation state.

AKS University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Unit – 5 Mass Spectrometry

Introduction basic principle, instrumentation, ion production E1, C1 FD, ESI and FAB, factors affecting fragmentation, ion analysis, ion abundance Mass spectral fragmentation of organic compounds, common functional groups, molecular ion peak, metastable peak. McLafferty rearrangement. Nitrogen rule. High resolution mass spectrometry. Structure elucidation of simple molecules using UV – Visible, IR, NMR and mass spectral techniques.

M.Sc. CHEMISTRY SEMESTER III
CODE: 76CH-302
COURSE NAME: PHOTOCHEMISTRY AND SOLID STATE

L	T	P
3	1	0

COURSE OUTCOMES:

After the completion of this course, the learner will be able to:

- CO1: Understand theoretical aspect of photochemistry .
- CO2: Apply the principle of photochemistry in photochemical process
- CO3: Understand the principle of solid state reaction .
- CO4: solve the problem related solid state and photochemistry
- CO5: Apply the knowledge of solid state for preparing semiconductor.

PHOTOCHEMISTRY & SOLID STATE CHEMISTRY

Unit - 1

Photochemical Reactions Interaction of electromagnetic radiation with matter, types of excitations, fate of excited molecule, quantum yield, transfer of excitation energy, actinometry.

Determination of Reaction Mechanism Classification, rate constants and life times of reactive energy state determination of rate constants of reactions. Effect of light intensity on the rate of photochemical reactions. Types of photochemical reactions-photo dissociation, gas-phase photolysis. Photo chemical formation of smog, photochemistry of vision

Unit - 2

Photochemistry of Alkene Intramolecular reactions of the olefinic bond-geometrical isomerism, cyclisation reactions, rearrangement of 1,4- and 1,5-dienes. **Photochemistry of Aromatic Compounds** Isomerisations, additions and substitutions.

Photochemistry of Carbonyl Compounds Intramolecular reactions of carbonyl compounds-saturated, cyclic and acyclic, α,β unsaturated and α,γ unsaturated compounds, Intermolecular cycloaddition reactions-dimerisations and oxetane formation. Singlet molecular Oxygen reaction.

Unit - 3

Solid State Reactions General principles, experimental procedure, co-precipitation as a precursory to solid state reactions, kinetics of solid state reactions.

Crystal Defects and Non-Stoichiometry Perfect and imperfect crystals, intrinsic and extrinsic defects-point defects, line and plane defects, vacancies-Schottky defects and Frenkel defects. Thermodynamics of Schottky and Frenkel defect formation, colour centres, non-stoichiometry and defects.

Unit - 4

Electronic Properties and Band Theory Metals, insulators and semiconductors, electronic structure of solids band theory band structure of metals, insulators and semiconductors, Intrinsic and extrinsic semiconductors, doping semiconductors, p-n junctions, superconductors.

Unit – 5 Organic Solids

Electrically conducting solids. organic charge transfer complex, organic metals, new superconductors. Liquid Crystals: Types of liquid crystals: Nematic, Smectic, Ferroelectric, Antiferroelectric, Various theories of LC, Liquid crystal display, New materials.

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
<p>SO5.1 Explain the Electrically conducting solids.</p> <p>SO5.2 Explain the organic charge transfer complex.</p> <p>SO5.3 Explain the organic metals, new superconductors.</p> <p>SO5.4 Explain the Liquid Crystals : Types of liquid crystals:</p> <p>SO5.5 Explain the Nematic, Smectic, Ferroelectric, Antiferroelectric, Various theories of LC, Liquid crystal display, New materials.</p>		<p>Unit – 5 Organic Solids</p> <p>5.1 Electrically conducting solids.</p> <p>5.2 organic charge transfer complex,</p> <p>5.3 organic metals,</p> <p>5.4 new superconductors.</p> <p>Liquid Crystals:</p> <p>5.5 Types of liquid crystals: 5.6 Nematic, Smectic,</p> <p>5.7 Ferroelectric, Antiferroelectric,</p> <p>5.8 Various theories of LC,</p> <p>5.9 Liquid crystal display, New materials.</p> <p>T-1 Define the Ferroelectric, Antiferroelectric,.</p> <p>T-2 Various theories of LC.</p> <p>T-3 Explain the New materials</p>	<p>Explain the Liquid Crystals : Types of liquid crystals:</p>

SW-5 Suggested Sessional Work (SW):

a. Assignments:

Explain the organic metals, new superconductors.

b. Mini Project: Describe the Liquid Crystals : Types of liquid crystals:

c. Other Activities (Specify):

Brief of Hours suggested for the Course Outcome

Course Outcomes	Class Lecture (CI)	Sessional Work (SW)	Self Learning (SI)	Total hour (CI+SW+SI)
76CH102.1: Explain the Basic concepts of photochemical Reactions.	12	02	01	15
76CH102.2: Explain determination of reaction mechanism, photochemistry of alkene, aromatic compounds, carbonyl compounds.	12	02	01	15
76CH102.3: Describe the analysis solid state reactions, crystal defects and non-stoichiometry	12	02	01	15
76CH102.4: Explain the electronic properties and band theory.	12	02	01	15

AKS University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

76CH102.5: Explain and Apply the Electrically conducting solids. organic charge transfer complex, organic metals, new superconductors knowledge of organic solids.	12	02	01	15
Total Hours	60	10	05	75

Suggestion for End Semester Assessment

Suggested Specification Table (For ESA)

CO	Unit Titles	Marks Distribution			Total Marks
		R	U	A	
CO-1	Explain the Basic concepts of photochemical Reactions.	03	01	01	05
CO-2	Explain determination of reaction mechanism, photochemistry of alkene, aromatic compounds, carbonyl compounds.	02	06	02	10
CO-3	Describe the analysis solid state reactions, crystal defects and non-stoichiometry	03	07	05	15
CO-4	Explain the electronic properties and band theory.	-	10	05	15
CO-5	Explain and Apply the Electrically conducting solids. organic charge transfer complex, organic metals, new superconductors knowledge of organic solids.	03	02	-	05
Total		11	26	13	50

Legend:

R: Remember, E: Explain A: Apply

The end of semester assessment for Organic Chemistry I will be held with written examination of 50 marks

Note. Detailed Assessment rubric need to be prepared by the course wise teachers for above tasks. Teachers can also design different tasks as per requirement, for end semester assessment. Suggested Instructional / Implementation Strategies:

1. Improved Lecture
2. Tutorial
3. Case Method
4. Group Discussion
5. Role Play
6. Visit to NCL, CSIR laboratories
7. Demonstration
8. ICT Based Teaching Learning (Video Demonstration / Tutorials CBT, Blog, Facebook, Twitter, Whatsapp, Mobile, Online sources)
9. Brainstorming

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

M.Sc. Chemistry Semester III

Code: 76CH-303

Course Name: Analytical Chemistry

No. Of Credits: 4

L	T	P
3	1	0

Pre-requisite: Student should have basic knowledge of Role of analytical chemistry, Errors and Evaluation, Origin of water pollutants and their effects, Fuel analysis.

Rationale: The Course will provide applicable knowledge about General survey of instrumental techniques for the analysis of heavy metals in aqueous systems. drug analysis

COURSE OUTCOMES:

After the completion of this course, the learner will be able to:

CO1 Explain and apply theoretical aspect of analytical chemistry.

CO2: Analyse water, soil and biological fluid sample

CO3: Explain and identify the errors occurred during chemical analysis

CO4: Handle glass ware and reagent in scientific way

CO5: Expertise in laboratory safety

Unit I

Introduction - Role of analytical chemistry. Classification of analytical methods –classical and instrumental. Types of instrumental analysis. Selecting an analytical method. Neatness and cleanliness. Laboratory operations and practices. Analytical balance. Techniques of weighing, errors. Volumetric glassware cleaning and calibration of glassware. Sample preparations-dissolution and decomposition. Gravimetric techniques. Selecting and handling of reagents. Laboratory notebooks. Safety in the analytical laboratory.

UNIT II

Errors and Evaluation-Definition of terms in mean and median. Precision-standard deviation, relative standard deviation. Accuracy-absolute error. Types of error in experimental data-determinate(systematic), indeterminate(or random)and gross.

UNIT III

Analysis of water pollution- Origin of water pollutants and their effects. Sources of water pollution domestic, industrial, agricultural soil and radioactive wastes as sources of pollution objectives of analysis-parameter for analysis-colour, turbidity, total solids, conductivity, acidity, alkalinity, hardness, chloride, sulphate, fluoride, silica, phosphates and different forms of nitrogen. Heavy metal pollution-public health significance of cadmium, chromium, copper, lead, zinc, manganese, mercury and arsenic. General survey of

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

instrumental techniques for the analysis of heavy metals in aqueous systems. Measurements of DO, BOD & COD. Pesticides as water pollutants and analysis. Water pollution laws and standards.

UNIT IV

Analysis of Soil, Fuel, Body Fluids and Drugs- (a) Analysis of soil: moisture, pH, total nitrogen, phosphorus, silica, lime, magnesia, manganese, sulphur and alkali salts.

(b) **Fuel analysis:** solid, liquid and gas. Ultimate and proximate analysis-heating values- grading coal. Liquid fuels-flash point, aniline point, octane number and carbon residue. Gaseous fuels-producer gas and water gas –calorific values

UNIT V

Analysis of Soil, Fuel, Body Fluids and Drugs

(a) **Clinical chemistry:** Composition of blood collection and preservation of samples. Clinical analysis. Serum electrolytes, blood glucose, blood urea nitrogen, uric acid, albumin, globulins, barbiturates, acid and alkaline phosphates. Immunoassay principles of radioimmunoassay (RIA) and applications. The blood gas analysis trace elements in the body.

(b) **Drug analysis:** Narcotics and dangerous drugs. Classification of drugs. Screening by gas and thin-layer chromatography and spectrophotometric measurement.

Scheme of Studies:

Board of Study	Course Code	Course Title	Scheme of studies (Hours/Week)				Total Study Hours (CI+LI+SW+SL)	Total Credits (C)
			CI	LI	SW	SL		
Program Core (PCC)	76CH-303	Analytical Chemistry	4	0	1	1	5	4

Legend: CI: Class room Instruction (Includes different instructional strategies i.e. Lecture (L) and Tutorial

(T) and others),

LI: Laboratory Instruction (Includes Practical performances in laboratory workshop, field or other locations using different instructional strategies)

SW: Sessional Work (includes assignment, seminar, mini project etc.),

SL: Self Learning,

C: Credits.

Note: SW & SL has to be planned and performed under the continuous guidance and feedback of teacher to ensure outcome of Learning.

Scheme of Assessment: Theory

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

76CH303.1: Explain and apply theoretical aspect of analytical chemistry

M.Sc. Chemistry Semester III

Code: 76CH-304

Course Name: Bio Inorganic, Bio Physical, Bio Organic Chemistry

No. Of Credits: 4

L	T	P
4	0	0

Pre-requisite: Students must have fundamental knowledge of bio-molecules such as enzymes, vitamins, carbohydrates, nucleotides etc to understand the concept of bio-inorganic, bio-physical, bio-organic chemistry.

Rationale: The students studying bio-inorganic, bio-physical, bio-organic chemistry should possess foundational understanding about basic knowledge of standard free energy change in biological processes, exergonic and endergonic reactions etc to understand the basic principle of reactions involving biochemical processes.

Course Outcomes

After the completion of this course, the learner will be able to

76CH-304.1: Explain structure and function of metal complexes or metallo-proteins involved in storage & transportation of oxygen as well in transmission of energy.

76CH-304.2: Explain structure and function of metalloproteins like cytochrome and iron-sulphur proteins involved in electron transport processes and also describe various reactions catalysed by enzymes.

76CH-304.3: Explain the concept of enzymes and apply its production, purification and applications in various areas.

76CH-304.4: Describe mechanistic details of chemical reactions of various co-enzymic form of vitamins and also describe structure and function of proteins.

76CH-304.5: Explain standard free energy change in biochemical reactions and apply the same concept to hydrolysis and synthesis of ATP.

Unit-I (76CH-304.1): Metal ions in Biological System

A] Structure and Function of hemoglobin, myoglobin, hemocyanins and hemerythrin,

B] Metal complexes in transmission of energy: chlorophylls, photosystem I and photosystem II in cleavage of water

Unit-II (76CH-304.2): Electron transfer in Biological System

Structure and function of metalloproteins in electron transport processes-cytochromes and iron-sulphur proteins

Kinds of Reactions Catalysed by Enzymes

Nucleophilic displacement on a phosphorus atom. Isomerization and rearrangement reactions, enolic intermediates in isomerization reactions. Enzyme catalyzed carboxylation and decarboxylation reaction.

Unit-III (76CH-304.3): Enzymes and their biotechnological applications

Introduction of bioorganic chemistry and Enzymes, coenzymes, prosthetic groups, apoenzymes. Properties of enzymes like catalytic power, specificity and regulation. Proximity effects and molecular adaptation. Transition-state theory and orientation

Nomenclature and classification of enzymes. Fischer's lock and key and Koshland's induced fit hypothesis.

Large-scale production and purification of enzymes, techniques and methods of immobilization of enzymes, effect of immobilization on enzyme activity, enzymes and recombinant DNA technology.

Unit-IV (76CH-304.4): Co- Enzyme Chemistry and Biopolymer Interaction

A] Cofactors as derived from vitamins. Structure and biological functions of coenzyme A, thiamine pyrophosphate (TPP), pyridoxal phosphate, NAD⁺, NADP⁺, FMN, FAD, lipoic acid, vitamin B12. Mechanisms of reactions catalyzed by the above cofactors.

B] Biomimetic chemistry, crown ethers, cryptates.

C] Polypeptide and protein structures, introduction to protein folding problem. Forces involved in biopolymer interactions.

Unit-V (76CH-304.5): Cell membrane and transport of ions

Structure and functions of biological cell membrane, ion transport through cell membrane, Structure and functions of DNA and RNA in living systems.

Bioenergetics

Standard free energy change in biochemical reactions, exergonic, endergonic. Hydrolysis of ATP, synthesis of ATP from ADP.

Biopolymer and their molecular weight

Evaluation of size, shape, molecular weight Methods for determination of molar mass of biopolymers (a) Viscosity method (b) Sedimentation methods (c) Osmotic pressure methods

Scheme of Studies:

Board of Study	Course Code	Course Title	Scheme of studies (Hours/Week)				Total Study Hours (CI+LI+SW+SL)	Total Credits (C)
			CI	LI	SW	SL		
Program Core (PCC)	76CH-304	Bioinorganic, biophysical, bioorganic chemistry	4	0	1	1	6	4

Legend : CI:Class room Instruction (Includes different instructional strategies i.e. Lecture (L) and Tutorial (T) and others),

LI: Laboratory Instruction (Includes Practical performances in laboratory workshop, field or other locations using different instructional strategies)

AKSUniversity
Faculty of Basic Science, Department of Chemistry
 Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

SW: Sessional Work (includes assignment, seminar, mini project etc.),
SL: Self Learning,
C: Credits.

Note:

SW & SL has to be planned and performed under the continuous guidance and feedback of the faculty to ensure the outcome of Learning.

Scheme of Assessment: Theory

Board of Study	Course Code	Course Title	Scheme of Assessment (Marks)					End Semester Assessment (ESA)	Total Marks (PRA+ESA)
			Progressive Assessment (RA)						
			Class/Home Assignment Number 3 mark each (CA)	Class Test 2 (2 best out of 3) 10 mark each (CT)	Seminar or Class activity	Class Attendance (AT)	Total Marks (CA+CT+SA+AT)		
PCC	76CH-304	Bioinorganic, biophysical, bioorganic chemistry	15	20	10	5	50	50	100

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

Unit-I (76CH-304.1): Metal ions in Biological System

- A] Structure and Function of hemoglobin, myoglobin, hemocyanins and hemerythrin,
- B] Metal complexes in transmission of energy: chlorophylls, photosystem I and photosystem II in cleavage of water

Suggestion for End Semester Assessment

Suggested Specification Table (For ESA)

CO	Unit Titles	Marks Distribution			Total Marks
		R	U	A	
CO-1	Metal ions in Biological System	03	01	01	05
CO-2	Electron transfer in Biological System	02	06	02	10
CO-3	Enzymes and their biotechnological applications	03	07	05	15
CO-4	Co- Enzyme Chemistry and Biopolymer Interaction	-	10	05	15
CO-5	Cell membrane and transport of Ions	03	02	-	05
Total		11	26	13	50

Legend: R:Remember, U:Understand, A:Apply

The written examination of 50 marks will be held at the end of semester for Inorganic Chemistry

Note. Detailed Assessment rubric need to be prepared by the course wise teachers for above tasks. Teachers can also design different tasks as per requirement, for end semester assessment.

Suggested Instructional/Implementation Strategies:

19. Improved Lecture
20. Tutorial
21. Case Method
22. Group Discussion
23. Role Play
24. Visit to NCL, CSIR laboratories
25. Demonstration
26. ICT Based Teaching Learning (Video Demonstration/Tutorials CBT, Blog, Facebook, Twitter, Whatsapp, Mobile, Online sources)
27. Brainstorming

Suggested Learning Resources:

(j) **Books:**

AKSU University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

M.Sc. CHEMISTRY III

CODE: 76CH-305

Subject Name: Green Chemistry No. Of credits: 2

L	T	P
2	0	0

Pre-requisite: Students should have basic knowledge of chemistry

Rtional: After completion of course student will promote, develop and design environment benign chemical process and products.

COURSE OUTCOMES:

After the completion of this course, the learner will

CO1: Explain and apply concept and principle of green chemistry

CO2: Design environments sustainable and economical route of synthesis.

CO3: Adopt renewable and alternate resources of energy in various processes

CO4: Solve environmental issues by adopting the principle of green chemistry

UNIT I

PRINCIPLES & CONCEPT OF GREEN CHEMISTRY: Introduction, Concept and Principles, development of Green Chemistry, Atom economy reactions–rearrangement reactions, addition reactions, atom economic-sublimation, elimination, Wittig reactions, toxicity measures, Need of Green Chemistry in our day-to-day life.

UNIT II

EMERGING GREEN TECHNOLOGY AND ALTERNATIVE ENERGY SOURCES: Design for

Energy efficiency, Photochemical reactions, Advantages & Challenge faced by photochemical process. Microwave technology on Chemistry, Microwave heating, Microwave assisted reactions, Sonochemistry and Green Chemistry, Electrochemical Synthesis, Examples of Electrochemical synthesis.

UNIT III

RENEWABLE RESOURCES: Biomass, Renewable energy, Fossil fuels, Energy from Biomass, Solar Power, Other forms of renewable energy, Fuel Cells, Alternative economics, Syngas economy, hydrogen economy, Some other natural chemical resources.

UNIT IV

INDUSTRIAL CASE STUDIES: Methyl Methacrylate (MMA), Greening of Acetic acid manufacture, Dyeing, Application, Polyethylene, Ziegler-Natta Catalysis, Metallocene Catalysis, Eco friendly Pesticides-Insecticides.

AKSU University

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

76CH305.1: explain and apply concept and principle of green chemistry

Activity	AppX Hrs
CI	06
LI	0
SW	2
SL	1
Total	09

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1.1 understand basics of green chemistry SO1.2 explain basic principles of green chemistry SO1.3 understand rearrangements reactions SO1.4 Explain addition reactions, atom uneconomic- sublimation, elimination, witting reactions SO1.5 Understand need of green chemistry in our day to day life		Unit-1 1.1 Introduction, Concept and Principles, 1.2 Development of Green Chemistry, 1.3 Atom economy reactions – rearrangement reactions, 1.4 Addition reactions, atom uneconomic- sublimation, elimination, 1.5 Wittig reactions T-1 Toxicity measures, T2 Need of Green Chemistry in our day-to-day life.	Understand need of green chemistry day to day life.

SW-1 Suggested Sessional Work (SW):

a. Assignments: Discuss the principle of green chemistry and their synthesis

b. Mini Project:

chart on uses of green chemistry in day to day life

c. Other Activities (Specify):

Note on green synthesis reactions

AKS University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

76CH305: 2: design environments sustainable and economical route of synthesis.

Activity	AppX Hrs
CI	07
LI	0
SW	2
SL	1
Total	10

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO2.1 Understand green synthesis techniques SO2.2 Explain alternative energy sources SO2.3 Understand photochemical reactions and advantages and challenges faced by photochemical process SO2.4 Explain Microwave technology, microwave heating and microwave assisted reactions SO2.5 Understand sono chemistry, Green chemistry & Electrochemical synthesis with example		Unit-2: 2.1 Design for Energy efficiency, 2.2 Photochemical reactions, 2.3 Advantages & Challenge faced by photochemical process. 2.4 Microwave technology on Chemistry, 2.5 Microwave heating, and Microwave assisted reactions, T-1 Sonochemistry and Green Chemistry, T-2 Electrochemical Synthesis, Examples of Electrochemical synthesis.	Studied different type of green synthesis techniques.

SW-2 Suggested Sessional Work (SW):

a. Assignments:

Apply different type of green synthesis techniques.

b. Mini Project:

Prepare chart on green synthesis techniques.

c. Other Activities (Specify):

Write an essay on sono chemistry and green chemistry

76CH305.3: Adopt renewable and alternate resources of energy in various processes

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Activity	AppX Hrs

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
<p>SO3.1 Describe basics of Renewable resources</p> <p>SO3.2 Explain Biomass ,Renewable energy & Fossil fuels</p> <p>SO3.3 Explain Solar power & other forms of renewable energy and fuels</p> <p>SO3.4 Understand alternative economics ,syngas economy and hydrogen economy</p> <p>SO3.5 Explain some other natural chemical resources</p>		<p>Unit-3</p> <p>3.1 Biomass, Renewable</p> <p>3.2 energy from Fossil fuels, Energy from Biomass</p> <p>3.3 SolarPower,</p> <p>3.4 Other forms of renewable energy, Fuel Cells,</p> <p>3.5 Alternative economics, T-1 Syngas economy, hydrogen economy, T-2 Some other natural chemical resources.</p>	<p>Learn some other natural chemical resources</p>

SW-3 Suggested Sessional Work (SW):

- Assignments:** Discuss the renewable energy resources
- Mini Project:** Pictorial presentation of renewable energy
- Other Activities (Specify):**

Explanatory note on importance of renewable resources

AKS University
Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

76CH305.4: Solve environmental issues which can be solved by adopting the principle of green chemistry

Activity	AppX Hrs
CI	07
LI	0
SW	2
SL	1
Total	10

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO4.1 Discuss basics of industrial case studies SO4.2 Explain Methyl Methacrylate & greening of acetic acid SO4.3 Explain and apply dyeing and its application SO4.4 Explain polyethylene, Ziegler Natta Catalysis, Metallocene catalysis, Eco friendly pesticides- insecticides		Unit-4 4.1 Methyl Methacrylate (MMA), 4.2 Greening of Acetic acid manufacture, 4.3 Dyeing, Application, 4.4 Polyethylene, 4.5 Ziegler-Natta Catalysis, T-1 Metallocene Catalysis, T-2 Eco friendly Pesticides- Insecticides.	Eco friendly pesticides & insecticides

SW-4 Suggested Sessional Work (SW):

a. Assignments:

Note on natural dyes

b. Mini Project:

Prepare chart on Ziegler-Natta catalysis.

c. Other Activities (Specify):

Importance and applications of greening of acetic acid manufacture.

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Brief of Hours suggested for the Course Outcome

Course Outcomes	Class Lecture (Cl)	Sessional Work (SW)	Self Learning (Sl)	Total hour (Cl+SW+Sl)
76CH305.1: Explain and apply concept and principle of green chemistry	07	02	01	10
76CH305.2 Design environments sustainable and economical route of synthesis	09	02	01	12
76CH305.3: Adopt renewable and alternate resources of energy in various processes	07	02	01	10
76CH305.4: Solve environmental issues which can be solved by adopting the principle of green chemistry	07	02	01	10
Total Hours	37	10	05	52

Suggestion for End Semester Assessment

Suggested Specification Table (For ESA)

CO	Unit Titles	Marks Distribution			Total Marks
		R	U	A	
CO-1	Principle & Concept of Green Chemistry	03	01	01	05
CO-2	Emerging Green Technology and Alternative Energy sources	02	06	02	10
CO-3	Renewable resources	03	07	05	15
CO-4	Industrial case studies	-	10	05	15
Total		11	26	13	50

Legend:

R: Remember,

U: Understand,

A: Apply

The end of semester assessment for Organic Chemistry I will be held with written examination of 50 marks

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Note. Detailed Assessment rubric need to be prepared by the course wise teachers for above tasks. Teachers can also design different tasks as per requirement, for end semester assessment.

Suggested Instructional/Implementation Strategies:

28. Improved Lecture
29. Tutorial
30. Case Method
31. Group Discussion
32. Role Play
33. Visit to NCL, CSIR laboratories
34. Demonstration
35. ICT Based Teaching
Learning (Video Demonstration/Tutorials CBT, Blog, Facebook, Twitter, Whatsapp, Mobile, Online sources)
36. Brainst

Suggested Learning Resources:

(k) Books:

S. No.	Title	Author	Publisher	Edition & Year
1	Green Chemistry and Introductory text,	Mike Lancaster,		II Edition
2	P.T. Anastas and J.C Warner, Green Chemistry theory and Practice	V Kumar	Oxford University Press, Oxford	Oxford University Press, Oxford (1988)
3	A Text Book of Green Chemistry	Sankar P. Dey Nayim Sepay	Protti D. Dondiet. al., Green Chemistry	
4	Green Chemistry A Text Book	V.K. Abdullah		
5	An Introductory Text on Green Chemistry	Indu Tucker Sidhwani Rakesh K. Sharma	Wiley	Blackwell, London (2007)

CODE: 76CH-351

Course Name: Instrumental Techniques in Chemical Analysis Lab

No. Of Credits: 2

L	T	P
0	0	2

Pre – requisite: students should have basic knowledge of laboratory safety as well as qualitative analysis and quantitative analysis

Rationale : This course provides skill in synthesis of organic & inorganic compounds and qualitative & quantitative analysis.

Course Outcomes:

After the completion of this course, the learner will

- CO1: Explain and apply chromatography techniques.
- CO2: Apply spectroscopic techniques and characterize chemical compounds.
- CO3: Analyse sample by conductivity meter, pH meter and potentiometry.
- CO4: Analyse qualitatively or quantitatively inorganic/organic compounds.
- CO5: Apply microwave & ultra sound organic synthesis techniques.

Unit -1 Chromatography

1.1 Paper chromatographic separation

- a. Separation of Ag(I), Pb(II) and Hg(II) ions by chromatography method
- b. Separation of Bi(III), Cu(II) and Cd(II) ions by chromatography method

1.2 Column chromatography

- a. Separation of Zn(II) and Mg(II) in the given unknown solution by anion exchange Resin (Amberlite IRA-400) column followed by their estimation with N/100 EDTA and Eriochrome Black-T as an indicator.
- b. Separation of Ni and Co in the given unknown sample solution by Anion exchange column followed by their estimation by back titration using EDTA and xylenol orange as an indicator.

1.3 Thin layer chromatography

- a. To separate a mixture of amino acids by Thin layer chromatography (TLC) and identify the test amino acids by measuring their R_f values.
- b. Separation of Ni(II), Co(II) and Zn(II) ions by thin layer chromatography method.

Unit -2 Spectrophotometry And Colorimetry

- 2.1. Verification of Beer's Law and concentration of KMnO₄ by digital double beam Spectrophotometer.
- 2.2 Spectrophotometric determination of fluoride, iron,
- 2.3. Spectrophotometric determination of carbohydrate, ascorbic acid

Unit -3 Conductometry, Ph Metry & Potentiometry

- 3.1 To determine the solubility of the given sparingly soluble salt by conductance measurements.
- 3.2 Determine the composition of mixture of Acetic acid and HCl by conductometric titration.
- 3.3 Determination of Hammett equation of o, m, p amino / nitro benzoic acid by pH measurement method
- 3.4 Determination of pK values of maleic acid/ malonic acid by potentiometric titration with sodium hydroxide

UNIT 4 Inorganic Qualitative Analysis-

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

4.1 Insoluble residue, Rare metal analysis

4.1.1 white residue, yellow residue and green residue

4.1.2 Analysis of mixture containing rare elements like molybdenum, tellurium, zirconium

Organic qualitative analysis

4.2 Separation and identification of ternary mixture of organic compounds

Unit 5 Sustainable Synthesis And Isolation

Two step Micro wave/ ultrasound assisted synthesis of organic compounds/inorganic compounds

Microwave / ultrasound assisted extraction of natural products

SW-3 Suggested Sessional Work (SW):

a. Assignments:

Discuss mechanistic approach of synthesis of dibenzalacetone

b. Mini Project:

Purification of aspirin

c. Other Activities (Specify):

NMR Study of purified compound

76CH351: analyse qualitatively or quantitatively inorganic/organic compound.

AKS University
Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Activity	AppX Hrs
LI	2 (2hr each)
SW	1
SL	1
Total	4

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1 Apply inorganic and organic qualitative analysis techniques SO2 separate and identify of ternary organic mixture	Unit 4. Inorganic qualitative analysis Insoluble residue, Rare metal analysis white residue, yellow residue and green residue analysis of mixture containing rare elements like molybdenum, tellurium, zirconium organic qualitative analysis Separation and identification of ternary mixture of organic compounds		More about analysis techniques

SW-4 Suggested Sessional Work (SW):

a. Assignments:

Discuss separation and identification of ternary organic mixture.

B. Mini Project:

Determination of boiling point of liquid organic compounds

c. Other Activities (Specify):

study more about qualitative and quantitative analysis

AKS University
Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

76CH351: 5: apply microwave & ultra sound organic synthesis techniques

Activity	AppX Hrs
LI	2 (2hr each)
SW	1
SL	1
Total	6

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1 learn synthesis of organic compound by microwave /ultrasound techniques SO2 learn synthesis of inorganic compound by microwave/ultrasound techniques	Unit5. Two step Micro wave/ ultrasound assisted synthesis of organic compounds/inorganic compounds Microwave / ultrasound assisted extraction of natural products		Synthesis of organic and inorganic compounds

SW-4 Suggested Sessional Work (SW):

a. Assignments:

Discuss determination of Iodine value and its importance

B. Mini Project:

Determination of specific gravity of different edible oil

C. Other Activities (Specify):

Discuss determination of RM value and its importance

POs & PSOs No.	COs No. & Titles	SOs No.	Laboratory Instruction (LI)	Classroom Instruction (CI)	Self Learning (SL)
PO1,2,3,4,5,6 7,8,9,10,11,12 PSO 1,2, 3, 4	CO1. Explain and apply chromatography techniques	S O 1 , S O 2	Unit 1. Paper chromatographic separation Separation Ag(I), Pb(II) and Hg(II) ions by chromatography method Separation Bi(III), Cu(II) and Cd(II) ions by chromatography method 1.2 Column chromatography Separation of Zn(II) and Mg(II) in the given unknown solution by anion exchange Resin (Amberlite IRA-400) column followed by their estimation with N/100 EDTA and Eriochrome Black-T as an indicator. Separation of Ni and Co in the given unknown sample solution by Anion exchange column followed by their estimation by back titration using EDTA and xylenol orange as an indicator. 2 Thin layer chromatography To separate a mixture of amino acid by Thin layer chromatography (TLC) and identify the test amino acids by measuring their R _f values. Separation Ni(II), Co(II) and Zn(II) ions by thin layer chromatography method		Purification of organic compounds by crystallization Preparation of Required reagent for qualitative organic analysis
PO1,2,3,4,5,6 7,8,9,10,11,12 PSO 1,2, 3, 4	CO2. understand and apply spectroscopic techniques	SO1, SO2	Unit 2. 2.1. Verification of Beer's Law and concentration of KMnO ₄ by digital double beam Spectrophotometer. 2.2 Spectrophotometric determination of fluoride, iron, 2.3. Spectrophotometric determination of carbohydrate, ascorbic acid		Purification of organic compounds (with bifunctional group) by crystallization Preparation of Required reagent for qualitative organic analysis
PO1,2,3,4,5,6 7,8,9,10,11,12 PSO 1,2, 3, 4	CO.3: apply and understand conductivity meter, pH meter, and potentiometry	S O 1 , S O 2	Unit 3. 3.1 To determine the solubility of the given sparingly soluble salt by conductance measurements. 3.2 Determine the composition of mixture of Acetic acid and HCl by conductometric titration. 3.3 Determination of Hammett equation of o, m, p amino / nitro benzoic acid by pH measurement method 3.4 Determination of pK values of maleic acid/ malonic acid by potentiometric titration with sodium hydroxide		Purification of synthesized compounds via methods other than crystallization
PO1,2,3,4,5,6 7,8,9,10,11,12 PSO 1,2, 3, 4	CO.4: analyze inorganic & organic qualitative analysis techniques	S O 1 , S O 2	Unit 4. Inorganic qualitative analysis Insoluble residue, Rare metal analysis white residue, yellow residue and green residue analysis of mixture containing rare elements like molybdenum, tellurium, zirconium organic qualitative analysis Separation and identification of ternary mixture of organic compounds		Purification by distillation under reduced pressure
PO1,2,3,4,5,6 7,8,9,10,11,12 PSO 1,2, 3, 4	CO.5: Apply and understand microwave and ultrasound organic synthesis techniques	SO1, SO2	Unit 5. Two step Microwave/ ultrasound assisted synthesis of organic compounds/inorganic compounds Microwave / ultrasound assisted extraction of natural products		Physical parameters of oil and fat analysis

AKSU University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

CODE: **Audit Course

Course Name: Human Value, Professional Ethics & Scientific Writing

CREDIT 0

L	T	P
1	0	0

Pre-requisites- Students should have good communications skill

Rationale- Students will prepare for holistic development, impeccable governance, effective management and Justify climate where 'rights' are encouraged and 'wrongs' are discouraged

Course Outcome: After completion of this course students will

CO1: Create environment in industry/institutions with the highest level of values and ethics

CO2: Apply learning process for holistic development

CO3: Create an environment of impeccable governance

CO4: Create an environment well-laid system of rewards and reprimand

CO5: Will act enable justice and equity for all And Expert in writing scientifically

HUMAN VALUES AND PROFESSIONAL ETHICS

UNIT I Ethics -Definitional aspects; relevance of ethics in society; scope of ethics

UNIT II The philosophical basis of ethics, considerations on moral philosophy personal and family ethics.

UNIT III Ethics in public affairs - Ethical standards for elected representatives of the people; ethics for the bureaucracy, police and other institutions of coercive authority; basic values in the civil services such as dispassion, non-partisanship, moral integrity, objectivity, dedication to public service and empathy for weaker sections and groups in society, and non-corruptibility.

UNIT IV Ethics and professions: - ethical values, standard and practices concerning the legal profession, medicine, engineering, etc. Ethics at the workplace: - cybercrime, plagiarism, sexual misconduct, fraudulent use of institutional resources, etc.

UNIT V: Review paper writing, Report writing, Research paper writing, Thesis Writing.

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including, Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

CO1: Create environment in industry/institutions with the highest level of values and ethics

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

CODE: 76CH-352

Course Name: Project Work

- 2 0 credit (10 credit 3rd + 10 credit 4th semester)

Pre-requisite: Students should have fundamental of a chemical analysis

Rational: Students will do research in selected area and interpretate data

Course outcome: After completion of this course students will

CO1: Create new knowledge in chemical science

CO2; Explain data obtained during research

CO3: Present and evaluate research findings

CO4; Write research findings in form of research paper

CO5: Solve environmental issues which are based on chemical science

Guidelines for Project work

To provide expertise in research, project work will be allotted to students in 3rd semester and it will be ended in last of 4th semester. Project topic will be selected by students in 3rd semester after review of some research papers according to chosen field in chemical science. The project work can be selected and carried out in any thrust areas of subject (Experimental or Theoretical) under the guidance of allotted supervisor of the department. The students must submit their thesis/ report in the department as per the date announced for the submission. In 3rd semester students will submit current report and final submission will be in 4th semester.

Internal assessment of the project work will be carried out by respective supervisor through power point presentation given by candidates in last of semester 3rd and 4th. External assessment of the dissertation work will be carried out by an external examiner (nominated by the Chairperson of the Department) through power-point presentation given by candidates

1. Dissertation will contain a cover page, certificate signed by student and supervisor, table of contents, introduction, Objective, Literature review, methodology, results and discussions conclusion, and references.

- The paper size to be used should be A-4 size.
- The font size should be 12 with Times New Roman.
- The text of the dissertation may be typed in 1.5 (one and a half) space.

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised as on 01 August 2023)

- The print out of the dissertation shall be done on both sides of the paper (instead of single side printing)
 - The total no. of written pages should be between 40 to 60 for dissertation.
2. The candidate shall be required to submit two soft bound copies of dissertation along with a CD in the department as per the date announced.
 3. Dissertation will be evaluated internally by the supervisor allotted to the student during the semester.
 4. The candidate will defend her/his dissertation/project work through presentation before the External examiner at the end of semester and will be awarded marks.
 5. In case, a student is not able to score passing marks in the dissertation exam, he/she will have to resubmit her/his dissertation after making all corrections/improvements & this dissertation shall be evaluated as above. The candidate is required to submit the corrected copy of the dissertation in hard bound within two weeks after the viva-voce .

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

M Sc. Chemistry Semester IV

Code: 76ch-401

Course Name: Industrial Chemistry

Credits: 4

L	T	P
4	0	0

Pre-requisite: Students should have basic knowledge of chemical industry, theoretical aspect of glass, ceramics, fertilizer and cement manufacturing soap, match, metal powders'.

Rationale: The students studying organic chemistry should possess foundational understanding about chemical bonding, structure, reactions and stereochemistry of organic compounds. This will provide applicable knowledge about Nature of bonding in organic compounds, stereochemistry of organic compounds, reaction mechanisms, structure and reactivity, aliphatic and aromatic nucleophilic substitution

Course Outcomes:

After the completion of this course, the learner will be able to:

76CH401.1: Apply quality of raw materials and energy for specific chemical industry

76CH401.2: Expert in theoretical aspect of glass, ceramics, fertilizer and cement manufacturing.

76CH401.3: Explain preparation of materials in small scale industries like soap, match, metal powders etc

76CH401.4: Perform work according to need of sugar industry

76CH401.5: Capable to provide solution of environmental issues related to chemical industry

Unit I

Raw Materials and Energy for Chemical Industry: Raw materials – Characteristics of raw materials and their resources – methods of raw material concentrations – integral utilization of raw materials. Energy for chemical industry – Fuels – classification of fuels – coal – fuel gases and liquid fuels – petroleum – cracking – Octane number – cetane number – composition and uses of coal gas, water gas, producer gas, oil gas and gobar gas.

Unit II

Cement, Ceramics, Glass and Fertilizers Cement: Manufacture – Wet Process and Dry process. Types, Analysis of major constituents, setting of cement, reinforced concrete. Cement industries in India. Ceramics: Important clays and feldspar, glazing and verification.

Glass: Types, Composition, manufacture of Optical glass, colored glasses, lead glass and neutron absorbing glass. Fertilizers: Fertilizer industries in India, Manufacture of ammonia, ammonium salts, urea, superphosphate, triple superphosphate and nitrate salts.

Unit III

Small Scale Chemical Industries Electrothermal and electrochemical industries: electroplating surface coating industries – oils, fats and waxes – soaps and detergents – cosmetics. Match industries and fire works: manufacture of some industrially important chemicals like potassium chlorate, and red

AKSU University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

phosphorus – metal powders.

Unit IV

Sugar and Agro Chemical Sugar: Cane sugar manufacture, recovery of sugar from molasses, sugar estimation, sugar industries in India. Agrochemical industries: Important categories of insecticides, fungicides, herbicides. Mode of action and synthesis of common pesticides like Gammexane, DDT, alathrin, Parathion, Malathion, Baygon, DDVP, Warfarin.

Unit V

Industrial Pollution & Chemical Toxicology Introduction – causes of industrial pollution – thermal power plants – nuclear power reactors– fertilizers and chemical industry – pulp and paper industries – agro based industries – cement industry. Toxic Chemicals in the environment – biochemical effects of arsenic, cadmium, lead, mercury and cyanide.

Scheme of Studies:

Board of Study	Course Code	Course Title	Scheme of studies (Hours/Week)				Total Study Hours (CI+LI+SW+SL)	Total Credits (C)
			CI	LI	SW	SL		
Program Core (PCC)	76CH401	INDUSTRIAL Chemistry	4	0	1	1	5	4

Legend: **CI:** Class room Instruction (Includes different instructional strategies i.e. Lecture (L) and Tutorial

(T) and others),

LI: Laboratory Instruction (Includes Practical performances in laboratory workshop, field or other location using different instructional strategies)

SW: Sessional Work (includes assignment, seminar, miniproject etc.),

SL: Self Learning,

C: Credits.

Note:

SW & SL have to be planned and performed under the continuous guidance and feedback of the teacher to ensure the outcome of Learning.

AKSU University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. in Chemistry Program (Revised on 01 August 2023)

The end of semester assessment for industrial chemistry will be held with written examination of 50 marks

Note. Detailed Assessment rubric need to be prepared by the course wise teachers for above tasks. Teachers can also design different tasks as per requirement, for end semester assessment.

Suggested Instructional/Implementation Strategies:

37. Improved Lecture
38. Tutorial
39. Case Method
40. Group Discussion
41. Role Play
42. Visit to NCL, CSIR laboratories
43. Demonstration
44. ICT Based Teaching Learning (Video Demonstration/Tutorials CBT, Blog, Facebook, Twitter, Whatsapp, Mobile, Online sources)
45. Brainstorming

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Course Name: Research Methodology & Research Ethics

Course Code: 76 CH402

No. Of Credits: 2

L	T	P
2	0	0

Pre-requisite: Students must have fundamental knowledge of precision and accuracy, types of error, data collections, mean, median and mod etc to understand the concept of research program and its methodology.

Rationale: The rationale for choosing a specific research methodology is crucial as it provides a solid foundation for the entire research process. The choice of methodology should align with the research objectives and questions, guiding the researcher in collecting, analyzing, and interpreting data.

Course Outcomes:

After the completion of this course, the learner will be able to

76CH401.1: Discuss the purpose of research, research process and research design by acquiring the knowledge of types and method of research.

76CH-401.2: Conceptualize and design research projects, including selecting appropriate data collection methods and planning for subsequent analysis.

76CH-401.3: Explain the processing and analysis of data with the skills and knowledge necessary to manage and analyze data effectively.

76CH-401.4: Understand a foundational understanding of the ethical considerations, philosophical principles, and standards of scientific conduct that are crucial in various fields of study.

76CH-401.5: Explain of the ethical considerations and standards related to publishing academic and research work.

UNIT-I (76CH401.1): Introduction & Research design

Nature and objectives of research, Methods of Research: historical, descriptive and experimental. Types of Research, Research process, research approaches, criteria for good research meaning of research design .

UNIT II (76CH-401.2): Data Collection & Analysis

Types of data, methods and techniques of data collection, Hypothesis Testing, primary and secondary data, meta analysis, historical methods, content analysis, devices used in data collection.

UNIT III (76CH-401.3): Processing and analysis of data

Measures of central Tendency. Measures of dispersion. Measures of variation. Measures of central tendency vs. measures of dispersion. Normal distribution. Measures of skewness and Interpretation. Correlation and regression: types & application. Chi-square test its purpose and use.

UNIT IV (76CH-401.4): Philosophy, Ethics & Scientific conduct

Introduction to philosophy: definition, nature and scope, concept, branches, Ethics: definition, moral philosophy, nature of moral judgements and reactions, Ethics with respect to science and research Intellectual honesty and research integrity,

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

UNIT V (76CH-401.5): Publication Ethics

Publication ethics: definition, introduction and importance, Best practices / standards setting initiatives and guidelines: COPE, WAME, etc. Conflicts of interest Publication misconduct: definition, concept, problems that lead to unethical behavior and vice versa.

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

UNIT-I (76CH401.1): Introduction & Research design

Nature and objectives of research, Methods of Research: historical, descriptive and experimental. Types of Research, Research process, research approaches, criteria for good research meaning of research design.

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

SEMESTER IV

Elective Courses:

- 6 Polymer Chemistry (76CH403)
- 7 Heterocyclic Chemistry (76CH404)
- 8 Medicinal Chemistry & Natural product (76CH405)
- 9 Chemistry of materials (76CH406)
- 10 Advanced synthetic organic chemistry (76 CH407)

AKS University
Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Elective Courses

CODE: 76CH-403

COURSE NAME: Polymer Chemistry, No. Of credits:4

L	T	P
4	0	0

Pre-requisite: Students should have basic knowledge of Basic concepts : Monomers, repeat units, degree of polymerization Linear, branched and network polymers.

Rationale: The students studying polymer chemistry should possess foundational understanding about polymer chemistry, structure, reactions and application of organic and inorganic polymers . This will provide applicable knowledge about classification of polymers. polymerization : condensation, addition/radical chain-ionic and co-ordination and copolymerization. polymerization conditions and polymer reactions. polymerization in homogeneous and heterogeneous systems.

Course Outcomes:

After the completion of this course, the learner will

76CH403.1: Explain the Basic concepts of Monomers, repeat units, degree of polymerization Linear, branched and network polymers and Classification of polymers.

76CH403.2: Explain average molecular weight concept. Number, weight and viscosity average molecular weights. Polydispersity and molecular weight distribution

76CH403.3: Describe the analysis and testing of polymers Chemical and physical analysis of polymers

76CH403.4: Explain the structure, Properties and Applications of borazines, boranes and carboranes.

silicones, polymetalloxanes and polymetallosiloxanes,

76CH403.5: Apply the knowledge of Polymers based on Phosphorous-Phosphazenes, Polyphosphates

Polymers based on Sulphure-Tetrasulphur tetranitride and related compounds

Polymer Chemistry

Unit - 1

Basics: Importance of polymers. Basic concepts : Monomers, repeat units, degree of polymerization Linear, branched and network polymers. Classification of polymers. Polymerization : condensation, addition/radical chain-ionic and co-ordination and copolymerization. Polymerization conditions and polymer reactions. Polymerization in homogeneous and heterogeneous systems.

Unit - 2

Polymer Characterization: Polydispersion-average molecular weight concept. Number, weight and viscosity

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

average molecular weights. Polydispersity and molecular weight distribution. The practical significance of molecular weight. Measurement of molecular weights. End-group, viscosity, light scattering, osmotic and ultracentrifugation methods.

Unit - 3

Analysis and testing of polymers Chemical analysis of polymers, spectroscopic methods, X-ray diffraction study. Microscopy. Thermal analysis and physical testing-tensile strength. Fatigue, impact. Tear resistance, Hardness and abrasion resistance.

Unit - 4

Inorganic Polymers: A general survey and scope of Inorganic Polymers special characteristics, classification, homo and hetero atomic polymers. Structure, Properties and Applications of

- Polymers based on boron-borazines, boranes and carboranes.
- Polymers based on Silicon, silicone's poly metalloxanes and poly metallosiloxanes, silazanes.

Unit - 5

Structure, Properties and Application of

- Polymers based on Phosphorous-Phosphazenes, Polyphosphates
- Polymers based on Sulphure-Tetr sulphur tetranitride and related compounds.

Co-ordination and metal chelate polymers.

Scheme of Studies:

Board of Study	Course Code	Course Title	Scheme of studies (Hours/Week)					Total Credits (C)
			CI	LI	SW	SL	Total Study Hours (CI+LI+SW+SL)	
Program Core (PCC)	76CH403	Polymer Chemistry	4	0	1	1	5	4

Legend:

CI: Class room Instruction (Includes different instructional strategies i.e. Lecture (L) and Tutorial (T) and others),

LI: Laboratory Instruction (Includes Practical performances in laboratory workshop, field or other locations using different instructional strategies)

SW: Sessional Work (includes assignment, seminar, mini project etc.),

AKS University

Faculty of Basic Science, Department of Chemistry

SL: Self Learning,

C: Credits.

Note: SW&SL has to be planned and performed under the continuous guidance and feedback of teacher to ensure outcome of Learning.

Scheme of Assessment: Theory

Board of Study	Course Code	Course Title	Scheme of Assessment (Marks)						End Semester Assessment	Total Marks
			Progressive Assessment (PRA)							
			Class/Home Assignment Number	Class Test 2 (2 best out of 3) 10 marks each (CT)	Seminar one (SA)	Class Attendance (AT)	Total Marks (CA+CT+SA+AT)	(ESA)		
PCC	76CH407	Polymer Chemistry	15	20	10	5	50	50	100	

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

76CH403.1: Apply the concept of classification of polymers. Polymerization process of compound.

Approximate Hours

Activity	AppX Hrs

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1.1 understand importance of polymers. basic concepts : monomers, repeat units, degree of polymerization	bonding in fullerenes	Unit-1.0 Basic Polymerisation 1.1 Importance of polymers. basic concepts 1.2 Monomers, repeat units, degree of polymerization	linear, branched and network polymers. classification of polymers.
SO1.2 Apply linear, branched and network polymers. classification of polymers.		1.3 Linear, branched and network polymers. 1.4 Classification of polymers.	
SO1.3 Explain polymerization : condensation, addition/radical chain-ionic and co-ordination and copolymerization.		1.5 Polymerization : condensation, addition/radical chain-ionic. 1.6 Co-ordination polymerization.	
SO1.4 Explain polymerization conditions and polymer reactions.		1.7 Copolymerisation.	
SO1.5 Understand and apply Polymerization in homogeneous and heterogeneous systems.		1.8 Polymerization conditions 1.9 Polymer reactions. T1-Polymerization in homogeneous. T2-Heterogeneous system T3- Mechanism of polymerization.	

SW-1 Suggested Sessional Work (SW):

a. Assignments:

Discuss polymerization : condensation, addition/radical chain-ionic and co-ordination and copolymerization.

b. Mini Project:

polymerization conditions and polymer reactions.

c. Other Activities (Specify):

Note on applications of Polymerization in homogeneous and heterogeneous systems.

AKSU University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

M.Sc. Chemistry Semester IV

Course Code: 76CH404

Course Name: Heterocyclic Chemistry (Elective Paper)

L	T	P
3	1	0

Pre-requisite: Students should have basic knowledge of nomenclature of heterocyclic compound, aromatic and non aromatic compound.

Rationale: This course will provide applicable knowledge about heterocyclic synthesis & small ring heterocycles, Fused heterocyclic systems & meso-ionic heterocycles, synthesis and characteristics of 5- and 6-membered ring systems- phosphorinanes, and phosphorines.

Course outcomes:

After the completion of this course, the learner will be able to:

CO1: Explain & apply heterocyclic chemistry

CO2: Explain nomenclature of heterocyclic chemistry.

CO3: Explain synthesis of heterocyclic compounds.

CO4: Apply heterocyclic synthetic route.

CO5: Explain to predict theoretically synthesis of newer heterocyclic

Unit-I

Nomenclature of Heterocycles & Aromatic Heterocycles

Replacement and systematic nomenclature (Hantzsch-Widman system) for monocyclic fused and bridged heterocycles. General chemical behavior of aromatic heterocycles, classification (structural type), criteria of aromaticity (bond lengths, ring current and chemical shifts in ¹H NMR-spectra, empirical resonance energy, delocalization energy and Dewar resonance energy, diamagnetic susceptibility exaltations).

Unit-II

Non-aromatic Heterocycles

Strain- Bond angle and torsional and their consequences in small ring heterocycles. Conformation of six-membered heterocycles with reference to molecular geometry, barrier to ring inversion, pyramidal inversion and 1,3-diaxial interaction. Stereo-electronic effects-anomeric and related effects. Attractive interactions- hydrogen bonding and intermolecular nucleophilic interactions.

Unit-III

Heterocyclic Synthesis & Small Ring Heterocycles

Principles of heterocyclic synthesis involving cyclization reactions and cycloaddition reactions.

Three-membered and four-membered heterocycles-synthesis and reactions of aziridines, oxiranes thiiranes and Azetidines.

Unit-IV

Fused Heterocyclic systems & Meso-ionic heterocycles.

Synthesis and reactions including medicinal applications of benzopyrroles, benzofurans and benzothiophenes. General classification, chemistry of some important meso-ionic heterocycles of type-A and B and their applications. Synthesis and reactions of pyrylium salts and pyrones. Synthesis and reactions of quinolinium, benzopyrylium salts and coumarins. Synthesis and reactions of diazines, triazines and thiazines. Synthesis and reactions of azepines and oxepines,

Unit-V

Heterocyclic systems Containing P, As, Sb and B

Heterocyclic ring containing P (synthesis and characteristics of 5- and 6-membered ring systems-phosphorinanes, and phosphorines), Heterocyclic rings containing As and Sb (synthesis and characteristics of 5- and 6-membered ring systems). Heterocyclic rings containing B (synthesis and reactivity).

AKSU University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

76CH404.1: CO1: Explain & apply heterocyclic chemistry

Activity	AppX Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
<p>SO1.1 Explain Systematic nomenclature allows individuals to uniquely identify and communicate the structures of heterocyclic and aromatic heterocyclic compounds.</p> <p>SO1.2 Explain The outcome of applying the nomenclature rules to heterocycles and aromatic heterocycles is a standardized way of naming these compounds.</p> <p>SO1.3 Explain The classification (structural type), criteria of aromaticity .</p> <p>SO1.4 Explain NMR-spectra, empirical resonance energy.</p> <p>SO1.5 Explain delocalization energy and Dewar resonance energy, diamagnetic susceptibility exaltations).</p>		<p>Unit-1.0 Nomenclature of Heterocycles & Aromatic Heterocycles</p> <p>1.1 Introduction of Heterocyclic compound.</p> <p>1.2 Replacement and systematic nomenclature (Hantzsch-Widman system) for monocyclic fused</p> <p>1.3 Replacement and systematic nomenclature (Hantzsch-Widman system) for bridged heterocycles.</p> <p>1.4 Introduction of aromatic heterocycles.</p> <p>1.5 Properties of aromatic heterocycles.</p> <p>1.6 Explain General chemical behavior of aromatic heterocycles.</p> <p>1.7 classification (structural type), criteria of aromaticity</p> <p>1.8 Introduction of the NMR spectra.</p> <p>1.9 Properties of the NMR-</p>	Types of heterocyclic compound

AKSU University

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

		<p>spectra.</p> <p>T1-Empirical resonance energy.</p> <p>T2- Delocalization energy and Dewar resonance energy.</p> <p>T3-diamagnetic susceptibility exaltations).</p>	
--	--	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------	--

SW-1 Suggested Sessional Work (SW):

a. Assignments:

Discuss Replacement and systematic nomenclature (Hantzsch-wWidman system) for monocyclic fused and bridged heterocycles.

b. Mini Project:

Delocalization energy and Dewar resonance energy

c. Other Activities (Specify):

Note on applications of NMR-spectra, empirical resonance energy.

76CH404.2: Explain nomenclature of heterocyclic chemistry.

Activity	AppX Hrs

<p>and 1,3-diaxial interaction.</p> <p>SO2.4 Explain Stereo-electronic effects-anomeric and related effects.</p> <p>SO2.5 Understand Attractive interactions- hydrogen bonding and intermolecular nucleophilic interactions.</p>		<p>2.5 Strain- Bond angle and torsional and their consequences in small ring heterocycles.</p> <p>2.6 Introduction of the Conformation of six-membered heterocycles compound.</p> <p>2.7 Properties of the Conformation of six-membered heterocycles compound.</p> <p>2.8 The Conformation of six-membered heterocycles with reference to molecular geometry.</p> <p>2.9 barrier to ring inversion, pyramidal inversion and 1,3-diaxial interaction.</p> <p>T1- Stereo-electronic effects-anomeric and related effects</p> <p>.</p> <p>T2- Attractive interactions- hydrogen bonding.</p> <p>T3- Intermolecular nucleophilic interactions.</p>	
------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--

SW-2 Suggested Sessional Work (SW):

a. Assignments:

Apply Strain- Bond angle and torsional and their consequences in small ring heterocycles.

b. Mini Project:

Explain Conformation of six-membered heterocycles with reference to molecular geometry

c. Other Activities (Specify):

Write an essay on Stereo-electronic effects-anomeric and related effects.

76CH404.3: Explain synthesis of heterocyclic compounds.

The end of semester assessment for Medicinal Chemistry and Natural Product I will be held with written examination of 50 marks

Note. Detailed Assessment rubric need to be prepared by the course wise teachers for above tasks. Teachers can also design different tasks as per requirement, for end semester assessment.

Suggested Instructional/Implementation Strategies:

64. Improved Lecture
65. Tutorial
66. Case Method
67. Group Discussion
68. Role Play
69. Visit to NCL, CSIR laboratories
70. Demonstration
71. ICT Based Teaching Learning (Video Demonstration/Tutorials CBT, Blog, Facebook, Twitter, Whatsapp, Mobile, Online sources)
72. Brainstorming

Suggested Learning Resources:

CODE: 76CH405

SUBJECT NAME: Medicinal Chemistry and Natural Product (Elective Paper), Credit 04

L	T	P
3	1	0

Pre-requisite: Students should have basic knowledge of Structure determination, stereochemistry, biosynthesis terpenoids, caretenoids, Plant Pigments.

Rationale: This course will provide applicable knowledge about Development of new drugs, uses of pharmacokinetics in drug development process, Cardiovascular Drug.

COURSE OUTCOMES:

CO1 Explain occurrence, structure properties terpenoids & caretenoids and apply biosynthesis of terpenoids and caretenoids

CO2 Create use of alkaloids and steroids natural products as starting materials for medicines.

CO3 Explain and apply of the field of Plant Pigments, Porphyrins & Prostaglandins natural product chemistry.

CO4. Apply the SAR, Mechanism of action and Pharmacokinetics & Pharmacodynamics of Natural products based medicine.

CO5 Explain and apply the metabolic process of biomolecules in health and illness (metabolic disorders)

UNIT 1: Terpenoids and caretenoids:

Classification, nomenclature, occurrence, isolation, general methods of structure determination, isoprene rule. Structure determination, stereochemistry, biosynthesis and synthesis of the following representative molecules: Citral, Geraniol, a-Terpeneol, Menthol, Farnesol, Zingiberene, Santonin, Phytol, Abietic acid and Beta-Carotene.

UNIT II: Alkaloids & Steroids

Definition, nomenclature and physiological action, occurrence, isolation, general methods of structure elucidation, degradation, classification based on nitrogen heterocyclic ring, role of alkaloids in plants.

Structure, stereochemistry, synthesis, Nicotine, Atropine, Quinine and Morphine.

Steroids : Isolation, structure determination and synthesis of cholestereol, Bile acids, Andosterone, Testosterone, progestrone, Aldosterone.

UNIT III - Plant Pigments, Porphyrins & Prostaglandins

Plant Pigments- Isolation and synthesis of Apigenin, Luteolin, Quercetin, Myrcetin, Quercetin-3-glucoside, Vitexin, Diadzein, Butein, Aureusin, Cyanidine-7- arabinoside, Cyanidin, Hirsutidin.

Porphyrins - Structure and synthesis of Haemoglobin and Chlorophyll Prostaglandins

Occurrence, nomenclature classification, biogenesis and physiological effects. Synthesis of PGE₂ and PGF₂

UNIT IV: Drug design, Pharmacokinetics & Pharmacodynamics

Development of new drugs, procedures followed in drug design, concepts of lead compound and lead modification, concepts of prodrug and soft drug, structure- activity relationship(SAR), factors affecting bioactivity, resonance, inductive effect, isosterism, bio-isosterism, spatial considerations. Theories of drug activity: occupancy theory, rate theory, induced fit theory. Quantitative structure activity relationship. History and development of QSAR. Concepts of drug receptors. Free-Wilson analysis, Hansch analysis, relationship between free-Wilson and Hansch analysis. LD-50, ED-50 (Mathematical derivations of equations excluded).

Pharmacokinetics

uses of pharmacokinetics in drug development process.

Pharmacodynamics

drug metabolism, xenobiotics, biotransformations, significance of drug metabolism in medicinal chemistry.

UNIT V: Different types medicine, structure function and uses

Antineoplastic agents, Cardiovascular Drug, Local Antiinfective Drugs, Psychoactive Drug- the Chemotherapy of mind, Antibiotics

Scheme of Studies:

Board of Study	Course Code	Course Title	Scheme of studies (Hours/Week)				Total Study Hours (CI+LI+SW+SL)	Total Credits (C)
			CI	LI	SW	SL		
Program Core (PCC)	76CH102	Medicinal Chemistry & Natural product	4	0	1	1	5	4

- Legend:**
- CI:** Class room Instruction (Includes different instructional strategies i.e. Lecture (L) and Tutorial (T) and others),
 - LI:** Laboratory Instruction (Includes Practical performances in laboratory workshop, field or other locations using different instructional strategies)
 - SW:** Sessional Work (includes assignment, seminar, mini project etc.),
 - SL:** Self Learning,
 - C:** Credits.

Note: SW & SL has to be planned and performed under the continuous guidance and feedback of teacher to ensure outcome of Learning.

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

76CH405.1: Explain occurrence, structure properties terpenoids & caretenoids and apply biosynthesis of terpenoids and caretenoids

Activity	AppX Hrs
CI	12
LI	0
SW	2
SL	1
Total	15

Session Outcomes (SOs)	Laboratory Instruction (LI)	Class room Instruction (CI)	Self Learning (SL)
SO1.1 Explain Classification, nomenclature, occurrence of terpenoids. SO1.2 Explain Isolation of terpenoids, general methods of structure determination of terpenoids. SO1.3 Explain isoprene rule in terpenoids. SO1.4 Explain Structure determination, stereochemistry, biosynthesis and synthesis of the following representative molecules: Citral, Geraniol, Menthol, Farnesol SO1.5 Explain Structure determination, stereochemistry, biosynthesis and synthesis of the following representative molecules: Zingiberene, Santonin, Phytol, Abietic acid and Beta-Carotene.		Unit-1.0 Terpenoids 1.1 Introduction of terpenoids, occurrence of terpenoids. 1.2 Isolation of terpenoids, general methods of structure determination of terpenoids. 1.3 isoprene rule. 1.4 Structure determination, stereochemistry, 1.6 Biosynthesis and synthesis of the following representative molecules: Citral, 1.7 Structure determination, stereochemistry, biosynthesis and synthesis of the Geraniol, 1.8 Structure determination, stereochemistry, biosynthesis and synthesis of the Zingiberene, 1.9 Structure determination, stereochemistry, biosynthesis and synthesis of the Santonin,	Application of terpenoids

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

		T1 - Structure determination, stereochemistry, biosynthesis and synthesis of the Phytol, T2 - Structure determination, stereochemistry, biosynthesis and synthesis of the Abietic acid and T3 - Structure determination, stereochemistry, biosynthesis and synthesis of the Beta-Carotene.	
--	--	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--

SW-1 Suggested Sessional Work (SW):

a. Assignments:

Discuss Structure determination, stereochemistry, biosynthesis and synthesis of the following representative molecules: Citral, Geraniol,

b. Mini Project:

Isolation of terpenoids from plants.

c. Other Activities (Specify):

Note on applications of Abietic acid and Beta-Carotene.

76CH405.2: Create use of alkaloids and steroids natural products as starting materials for medicines.

SW-2 Suggested Sessional Work (SW):

a. Assignments:

Apply Structure, stereochemistry, synthesis of Nicotine, Atropine.

b. Mini Project:

Occurrence, isolation, general methods of structure elucidation, degradation of alkaloid.

c. Other Activities (Specify):

Write an essay on medicinal values of specific structure determination and synthesis of Quinine

76CH405.3: Explain and apply the field of Plant Pigments, Porphyrins & Prostaglandins natural product chemistry.

AKSUniversity
Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

M.Sc. Semester IV
Course Name: Chemistry of Materials, Course Code 76CH406

L T P
3 1 0

Pre-requisite: Students should have basic knowledge of the chemistry of the design, synthesis, and characterization of assemblies of molecules whose properties arise from interactions between them of Chemistry of Material.

Rationale: The students studying chemistry of Materials should possess foundational understanding about Nanomaterials, Thermotropic liquid crystal, Ionic conductors, and application, High Tc superconductivity and Molecular hyperpolarisability. This will provide applicable knowledge about Ceramic structures, mechanical properties Dielectric susceptibility and dielectric constants chemistry of Material.

Course Outcomes:

After the completion of this course, the learner will

76CH-406.1 Apply the concept of *Ceramics*, Composites and Nanomaterials explain the characterization, properties and applications.

76CH-406.2 Explain the Liquid crystals the positional order and bond orientation and Optical properties of liquid crystals by Liquid crystals.

76CH-406.3 Explain the mechanism of ionic conduction, interstitial jumps (Frenkel); vacancy mechanism, diffusion superionic conductors, phase transitions and mechanism of conduction in superionic conductors. Examples and applications of ionic conductors.

76CH-406.4 Explain the High Tc superconductivity Preparation and characterization of 1-2-3 and 2-1-4 materials. Normal state properties, anisotropy, Temperature dependence of electrical resistance.

76CH-406.5 Apply the knowledge of the Molecular rectifiers and transistors, artificial photosynthetic devices, optical storage memory and switches, sensors. Conducting organics, organic superconductors, magnetism in organic materials. Fullerenes, doped and superconductors.

UNIT I: *Ceramics*, Composites and Nanomaterials. Ceramic structures, mechanical properties, clay products. Refractories, characterization, properties and applications. Microscopic composites, dispersion-strengthened and particle-reinforced composites, macroscopic composites. Nanocrystalline phase, preparation procedures, properties and applications.

UNIT II: Liquid Crystals. Thermotropic liquid crystals, positional order, bond orientational order, nematic and smectic mesophases. Molecular arrangement in smectic A and smectic C phases, optical properties of liquid crystals. Dielectric susceptibility and dielectric constants. Lyotropic phases and their description of ordering in liquid crystals.

UNIT III: Ionic Conductors. Types of ionic conductors, mechanism of ionic conduction, interstitial jumps (Frenkel); vacancy mechanism, diffusion superionic conductors, phase transitions and mechanism of conduction in superionic conductors. Examples and applications of ionic conductors.

UNIT IV: High Tc Materials. High Tc superconductivity. Preparation and characterization of 1-2-3 and 2-1-4 materials. Normal state properties, anisotropy, temperature dependence of electrical resistance, and optical phonon modes. Superconducting state; heat capacity; coherence length, elastic constants,

AKS University

Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

microwave absorption-pairing and multigap structure in high T_c materials. Applications of high T_c materials.

UNIT V: Organic Solids, Fullerenes, Molecular Devices. Conducting organics, organic superconductors, magnetism in organic materials. Fullerenes, doped, fullerenes as superconductors. Molecular rectifiers and transistors, artificial photosynthetic devices, optical storage memory and switches, sensors. Non-linear optical materials, non-linear optical effects. Molecular hyperpolarisability.

Scheme of Studies:

Board of Study	Course Code	Course Title	Scheme of studies (Hours/Week)				Total Study Hours (CI+LI+SW+SL)	Total Credits (C)
			CI	LI	SW	SL		
Program Core (PCC)	76CH406	Chemistry of material	4	0	1	1	6	4

Legend: CI: Class room Instruction (Includes different instructional strategies i.e. Lecture (L) and Tutorial (T) and others),
LI: Laboratory Instruction (Includes Practical performances in laboratory workshop, field or other locations using different instructional strategies)
SW: Sessional Work (includes assignment, seminar, mini project etc.),
SL: Self Learning,
C: Credits.

Note: SW & SL has to be planned and performed under the continuous guidance and feedback of teacher to ensure outcome of Learning.

Scheme of Assessment: Theory

Board of Study	Course Code	Course Title	Scheme of Assessment (Marks)						End Semester Assessment	Total Marks
			Progressive Assessment (PRA)					Total Marks		
			Class/Home Assignment Number 3 mark each (CA)	Class Test 2 (2 best out of 3) 10 marks each (CT)	Seminar one (SA)	Class Attendance (AT)	(CA+CT+SA+AT)

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course progresses, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

76CH406.1: Apply the concept of *Ceramics*, Composites and Nanomaterials explain the characterization, properties and applications.

<p>SO4.1 Explain High Tc superconductivity.</p> <p>SO4.2 Explain Preparation and characterization of 1-2-3 and 2-1-4 materials.</p> <p>SO4.3 Explain the anisotropy, temperature dependence of electrical resistance, and optical phonon modes.</p> <p>SO4.4 Explain Superconducting state; heat capacity; coherence length, elastic constants.</p> <p>SO4.5 Apply the concept of microwave absorption-pairing and multigap structure in high Tc materials. Applications of high Tc materials.</p>		<p>Unit-4.0 High Tc Materials</p> <p>4.1 The Preparation of Tc superconductivity.</p> <p>4.2 characterization of 1-2-3 and 2-1-4 materials.</p> <p>4.3 Normal state properties.</p> <p>4.4 anisotropy and optical phonon modes.</p> <p>4.5 Discuss the microwave absorption-pairing.</p> <p>4.6 Draw the multigap structure.</p> <p>4.7 Applications of high Tc materials.</p> <p>4.8 optical phonon modes.</p> <p>4.9 Superconducting state; heat capacity.</p> <p>T-1 Explain the heat capacity; coherence length, elastic constants.</p> <p>T-2 microwave absorption-pairing</p> <p>T-3 Draw the structure in high Tc materials.</p>	<p>Superconducting state</p> <p>Discuss the microwave absorption-pairing and multigap structure in high Tc materials.</p>

SW-4 Suggested Sessional Work (SW):

a. Assignments: Preparation and characterization of 1-2-3 and 2-1-4 materials.

b. Mini Project: Discuss the Superconducting state; heat capacity

c. Other Activities (Specify): Importance and Applications of high Tc materials.

76CH102.5: Apply the knowledge of the Conducting organics, organic superconductors, magnetism in organic materials. Fullerenes, doped, fullerenes as superconductors. Molecular rectifiers and transistors, artificial photosynthetic devices, optical storage memory and switches, sensors. Non-linear optical materials, non-linear optical effects. Molecular hyperpolarisability.

Activity	AppX Hrs

Brief of Hours suggested for the Course Outcome

Course Outcomes	Class Lecture (Cl)	Sessional Work (SW)	Self Learning (SI)	Total hour (Cl+SW+SI)
76CH406.1: Understand the concept of heterocyclic chemistry composites and Nonmaterial's compound properties and application and Microscopic composites in chemistry of material.	12	02	01	15
76CH406.2: Explain Liquid crystals the positional order and bond orientation and Optical properties of liquid crystals by Liquid crystals.	12	02	01	15
76CH406.3: Describe the mechanism of ionic conduction diffusion superionic, and application by ionic conductors.	12	02	01	15
76CH406.4 Explain the High Tc superconductivity Preparation and characterization of 1-2-3 and 2-1-4 materials. Normal state properties, anisotropy, Temperature dependence of electrical resistance.	12	02	01	15
76CH406.5: Apply the knowledge of the Molecular rectifiers and transistors, artificial photosynthetic devices, optical storage memory and switches, sensors. Conducting organics, organic superconductors, magnetism in organic materials. Fullerenes, doped and superconductors.	12	02	01	15
Total Hours	60	10	05	75

Suggestion for End Semester Assessment

Suggested Specification Table (For ESA)

CO	Unit Titles	Marks Distribution			Total Marks
		R	U	A	
CO-1	Ceramics, Composites and Nanomaterials.	03	01	01	05
CO-2	Liquid Crystals.	02	06	02	10

AKSU University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

CO-3	Ionic Conductors.	03	07	05	15
CO-4	High Tc Materials	-	10	05	15
CO-5	Organic Solids, Fullerenes, Molecular Devices.	03	02	-	05
Total		11	26	13	50

Legend:

R:Remember,

U:Understand,

A:Apply

The end of semester r as sessment for Organic Chemistry I will be held with written examination of 50 marks

Note.Detailed Assessment rubric need to be prepared by the course wise teachers for above tasks.Teachers can also design different tasks as per requirement, for end semester assessment.

Suggested Instructional/Implementation Strategies:

Improved Lecture/Tutorial/Case Method/Group Discussion /Role Play

Visitto NCL, CSIR laboratories

Demonstration

ICTBased Teaching Learning (Video Demonstration /Tutorials CBT, Blog, Facebook, Twitter, Whatsapp, Mobile, Online sources)Brainstorming

AKSU University
Faculty of Basic Science, Department of Chemistry
Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

M.Sc. Chemistry Semester IV

Code: 76CH-407

Course Name: Advanced Synthetic Organic Chemistry , Credit :4

L	T	P
3	1	0

Pre- requisite; Students should have basic knowledge of organic synthesis

Rational: After completion of this course students will design to synthesize organic molecules

COURSE OUTCOMES:

After the completion of this course, the learner will be able to:

CO1: Explain and apply theoretical aspect of Organometallic reagent.

CO2: Explain oxidative process of hydrocarbon, carbonyl compound.

CO3: Analyse the reduction process of hydrocarbon, carbonyl compound.

CO4: Explain Disconnection approach, functional group inter-conversions

CO5: Analyse two Group C-C Disconnections

UNIT I

Organometallic Reagents Principle , preparations, properties and applications of the following in organic synthesis with mechanistic details. Group I and II metal organic compounds- Li, Mg, Hg, Cd, Zn and Ce compounds. Transition metals- Cu, Pd, Ni, Fe , Co, Rh, Cr and Ti compounds
Other elements- S, Si, B and I compound.

UNIT II

Oxidation Introduction , different oxidative processes. Hydrocarbons- alkenes, aromatic rings, saturated C-H groups (activated and unactivated). alcohols, diol, aldehydes, ketones, ketals and carboxylic acids. Amines, hydrazines, and sulphides.

Oxidations with ruthenium tetroxide, iodobenzene diacetate and thallium(III) nitrate.

UNIT III

Reduction Introduction .different reductive processes.

Hydrocarbon – alkanes , alkenes, alkynes and aromatic ring .

Carbonyl compounds- aldehydes, ketones, acids and their derivatives. Epoxides. Nitro, nitroso, azo and oxime groups. Hydrogenolysis. Metallocenes, Nonbenzenoid Aromatics and polycyclic aromatic compound

General considerations, synthesis and reactions of some representative compounds.

UNIT IV

Disconnection Approach, Protecting Groups & One group C-C Disconnections

An introduction to synthons and synthetic equivalents. Disconnection approach, functional group inter-conversions, the importance of the order of events in organic synthesis, one group C-X disconnections, chemoselectivity, reversal of polarity, cyclisation reactions, amine synthesis

Principle of protection of alcohol, amine, carbonyl and carboxyl groups.

Alcohols and carbonyl compounds, regioselectivity, alkene synthesis, use of acetylenes and aliphatic nitro compounds in organic synthesis

AKSU University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

UNIT V

Two Group C-C Disconnections, Ring synthesis & Synthesis of some complex molecules

Diels –Alder reaction, 1,3-difunctionalised compounds, alpha,beta-unsaturated carbonyl compounds, control in carbonyl condensations, 1,5-difunctionalised compounds. Micheal addition and Robinson annelation.

Saturated heterocycles, synthesis of 3,4,5 and 6- membered rings, aromatic heterocycles in organic synthesis.

Application of the above in the synthesis of following compounds: Camphor, longifoline, Cortisone, Reserpine, Vitamin D, Juvabione, Aphidicolin and Fredericamcin A.

Scheme of Studies:

Board of Study	Course Code	Course Title	Scheme of studies (Hours/Week)					Total Credits (C)
			CI	LI	SW	SL	Total Study Hours (CI+LI+SW+SL)	
Program Core (PCC)	76CH-407	Advanced Organic Chemistry	4	0	1	1	5	4

Legend: CI: Class room Instruction (Includes different instructional strategies i.e. Lecture (L) and Tutorial (T) and others),

LI: Laboratory Instruction (Includes Practical performances in laboratory workshop, field or other locations using different instructional strategies)

SW: Sessional Work (includes assignment, seminar, mini project etc.),

SL: Self Learning,

C: Credits.

Note: SW & SL has to be planned and performed under the continuous guidance and feedback of teacher to ensure outcome of Learning.

Scheme of Assessment: Theory

Course-Curriculum Detailing:

This course syllabus illustrates the expected learning achievements, both at the course and session levels, which students are anticipated to accomplish through various modes of instruction including Classroom Instruction (CI), Laboratory Instruction (LI), Sessional Work (SW), and Self Learning (SL). As the course

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

As progress is made, students should showcase their mastery of Session Outcomes (SOs), culminating in the overall achievement of Course Outcomes (COs) upon the course's conclusion.

76CH407.1: Explain theoretical aspect of Organometallic reagent.

Application of the above in the synthesis of following compounds: Camphor, longifoline,

Brief of Hours suggested for the Course Outcome

Course Outcomes	Class Lecture (CI)	Sessional Work (SW)	Self Learning (SI)	Total hour (CI+SW+SI)
76ch303.1: Explain theoretical aspect of organometallic reagent.	12	02	01	15
76ch403.2: Explain oxidative process of hydrocarbon, carbonyl compound.	12	02	01	15
76ch403.3: Analyse the reduction process of hydrocarbon, carbonyl compound.	12	02	01	15
76ch403.4: Explain disconnection approach, functional group inter-conversions	12	02	01	15

AKS University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

76ch403.5: Analyse two group c-c disconnections approach..	12	02	01	15
Total Hours	60	15	05	75

Suggestion for End Semester Assessment

Suggested Specification Table (For ESA)

CO	Unit Titles	Marks Distribution			Total Marks
		R	U	A	
CO-1	Organometallic Reagents	03	01	01	05
CO-2	Oxidation	02	06	02	10
CO-3	Reduction	03	07	05	15
CO-4	Disconnection Approach, Protecting Groups & One group C-C Disconnections	-	10	05	15
CO-5	Ring synthesis & Synthesis of some complex molecules	03	02	-	05
Total		11	26	13	50

Legend:

R:Remember, U:Understand,

A:Apply

The end of semester assessment Advanced Synthetic organic chemistry will be held with written examination of 50 marks

Note. Detailed Assessment rubric need to be prepared by the coursewise teachers for above tasks. Teachers can also design different tasks as per requirement, for end semester assessment.

Suggested Instructional/Implementation Strategies:

82. Improved Lecture
83. Tutorial
84. Case Method
85. Group Discussion
86. Role Play
87. Visit to NCL, CSIR laboratories

AKSU University

Faculty of Basic Science, Department of Chemistry

Curriculum of M. Sc. In Chemistry Program (Revised on 01 August 2023)

88. Demonstration
89. ICT Based Teaching Learning (Video Demonstration/Tutorials CBT, Blog, Facebook, Twitter, Whatsapp, Mobile, Online sources)
90. Brainstorming

Suggested Learning Resources:

(s) Books:

S No.	Title	Author	Publisher	Edition & Year
1	Advanced organic chemistry: part a structure and mechanisms	Francis A. Carey , Richard J. Sundberg	Springer	Edition, 2008
2	Organic Synthesis (Reaction Mechanisms and Reagents)	Medtech Science Press	Medtech Science Press	Edition, 2022 1 January 2022
3	Organic Synthesis through Disconnection Approach	by P. S. Kalsi	Medtech Science Press	Edition, 2022
4	Intermediates for Organic Synthesis	by V.K. Ahluwalia , Pooja Bhagat	I.k. International	Edition, 2020
5	Organic Synthesis (Reaction Mechanisms and Reagents)	by G. Joshi	Medtech Science Press	Edition, 2022
